[edit] (U) Invitation

(S//NF) The Information Operations Center's Engineering Development Group (EDG) would like to announce the seventh Trusted Computing Jamboree. The Jamboree is organized and sponsored by the Security Portfolio of EDG's Emerging Technologies Branch (ETB). As in past years, the Jamboree will be an informal and interactive conference with an emphasis on presentations that provide important information to developers trying to circumvent or exploit new security capabilities.

(U) The Jamboree will be held Tuesday-Thursday, February 7-9, 2012 at the Lockheed Martin Dulles Executive Plaza II, 13560 Dulles Technology Drive, Herndon, VA 20171. Tuesday and Wednesday will run from 9am to 5pm, Thursday will run from 9am to 12pm.

(S//NF) The TCB Program continues to explore architectures that will have a significant impact on future Information Operations. Technologies such as the Trusted Platform Module (TPM) pose both threats and opportunities for the Intelligence Community.

(S//NF) The main purpose of the Jamboree will be to discuss how the results of the Security Portfolio research can be applied today. Rather than an overview of all the activities within the Program, we will present notable results that will provide developers insight into how to meet the threats of the TCG architectures and embedded architectures and how they can exploit new avenues of attack.
