Stop Creepy Online Tracking with Privacy Badger

EFF develops Privacy Badger software to enhance privacy online

- *Many companies secretly track your activity online,* recording who you are, what you're doing, and where you've been. This information can be sold without your knowledge, control, or consent.
- *Privacy Badger is a browser extension that automatically stops these trackers.* To the trackers, it's like you suddenly disappeared.
- *Privacy Badger is different from other privacy extensions.* Unlike other extensions which use a hand-assembled list of domains to block, Privacy Badger is designed to automatically discover trackers based on their behavior. By blocking trackers, it also manages to block many ads and speeds up your connection to most websites.
- *Privacy Badger goes beyond most browsers' built-in privacy features* by blocking forms of tracking they overlook.

How Does Privacy Badger Work?

- Privacy Badger isn't just one project; it is supported by two other automatic scanner projects, Badger Sett and Badger Swarm, which regularly scan the Web to learn about everyday trackers as they appear in the wild.
- Taking what's learned from those scanner projects, Privacy Badger is armed to block those trackers in real time from inside your browser.
- When your browser stops loading content from a source, that source can no longer track you. Voila—you're now safe from creepy tracking.

Get Privacy Badger Today!

- **Visit privacybadger.org** to download Privacy Badger for Chrome, Firefox, Firefox for Android, Edge, or Opera, and check out the FAQ to learn more.
