NON-RECORD

b6
b7C

DCS3000 is a pen register system that captures pertinent info from that side of the house. [redacted] criminal but I believe all pertinent info from the dark side is indexed into that system too. The info is also migrated into [redacted] and some agents sometimes upload info into [redacted].

b2
b7E

Thanks for tackling this!

Funny you should ask. Someone else just sent me an email asking about ACS and [redacted] And I have to work on those. (I am not sure why we would want telephone databases since minimization doesn't apply but I know that the EC asks about all databases with FISA material, and that would ostensibly include pen register info, so I have to check on that) [redacted] is a criminal system, for Title IIIs, is it not? If so, we are not concerned with it. Do not worry about the [redacted] That is run from headquarters and we can provide all the info on that. I don't know what DCS3000 is. Can you briefly explain it. Thanks.

Sorry to ask one of what I'm sure is a flood of questions about this, but . . .

The following databases are not listed in your message as one's covered by the "HQ team", nor were they listed in Dillingham's ec, do you know if these databases are subject to this tasking?:

b6
b7c

SENSITIVE BUT UNCLASSIFIED
NON-RECORD

This is to clarify the requirements of the 12/20/2005 EC that was sent to all FBI divisions concerning FBI databases and a need to respond by January 13, 2006 with a description of such databases.

The EC requires descriptions of databases that are used in field offices but that are Bureau-wide, such as [redacted] and [redacted]. We have decided that a more efficient manner of obtaining the same information is to have a single description of such databases, to include [redacted] and [redacted] circulated among the field offices. It will be drafted here at headquarters and Quantico. The field offices will simply need to state whether such descriptions are consistent with their particular operation and use of the database. If there are discrepancies, such discrepancies will have to be described. Hopefully, those descriptions will be circulated by the end of this week.

b2
b7E

There does remain the issue of access to those databases, which is particular to individual field offices. Therefore, field offices still need to respond to questions 7 through 9 of the EC, which focus upon access to the databases, and question 20, which focuses upon the audit trail.

Further, the EC requires descriptions of all databases that are unique to the field offices. That requirement still stands, and all questions with respect to such databases (1 through 20) need to be answered.

CDCs- please disseminate this to those people in your field office who have responsibility for this project. Hopefully, this will eliminate a great deal of work on their part, but will still provide a clear and concise explanation of the databases, as well as any variations in operation or use that exist through the Bureau.

If anyone has any substantive questions concerning the responses, please contact OTD. For more general questions, feel free to contact me at (571) [redacted]

I was forwarded your email by Mobile ASAC Bill Lewis regarding our FISA collection/processing systems.

Following are the access list(s) for [redacted] and Pen Register systems (Both DCS 3000 and [redacted]). Please note that the [redacted] contains FISA audio while the DCS 3000 (Wireless) and [redacted] (Wireline) both contain Pen Register data.

DCS 3000 and [redacted]

- TA [redacted] - Systems Administrator
- TTA [redacted] - Has been granted administrative privileges
- TTA [redacted] - Has been granted administrative privileges
- Elsur Technician [redacted] - Performs daily downloads of collected data for transfer to case agent

[redacted]

- TA [redacted] Systems Administrator
- TTA [redacted] Has been granted administrative privileges
- TTA [redacted] Has been granted administrative privileges
- BAE Contracto [redacted] (Retired TTA)-Has been granted administrative privileges for software and firmware upgrades.

b2
b6
b7C
b7E

Please note that the CSOC at Quantico has been granted remote access to the [redacted] system for health maintenance and to insure that this system remains operational during off hours.

[redacted]

Also note that we have an access point to the [redacted] in Mobile and have the ability to route FISA audio to Language Services Division. To date we have not passed any audio through this system and have not used EDMS. Should you need any additional information, I can be reached at the following telephone numbers...Steve

[redacted]

This is what I've learned from OTD:

Most wireless carriers have centralized their CALEA delivery points. In most cases, CDC information (**pen-register/trap-trace data**) for all FBI intercepts per carrier are delivered to one FBI gateway per carrier. The locations of the gateways vary and depend on the location and connection restrictions imposed by the carriers. **DCSnet** is a peerless and private IP network that supports the delivery and transport of CALEA-enabled intercept product from the FBI gateways to all 56 FBI field offices. It is an unclassified network, and is not used to transfer processed/collected ELSUR information--Nor is it in itself a collection system--the collection system is the DCS-3000.

The DCS-3000 is a suite of software applications that support the FBI's CALEA-based intercepts. This suite of applications has two primary functions: 1) a gateway between all carriers' delivery systems and the FBI's collection systems and centers (e.g., DCS-5000 in Atlanta Division), and 2) the primary collection system for all CALEA-enabled criminal pen-register and trap/trace intercepts.

As I understand, the DCS-3000 serves as a gateway between carriers and the DCS-5000 system for security reasons. In essence, Security division will not allow a classified collection system to have connection to the outside--hence the DCS-3000 serves as the link and is for that purpose just a transport of the FISA material from the carrier to the DCS-5000 system.

Have your heard of the Data Collection System Network (DCSNET) or the Rapid Prototyping Facility Network (RPFNET). Also , are DCS 3000 and DCS 5000 variations of each other, as far as pen register collection.

I have reading a list of databases that the Security Division sent so that's where these issues are coming from.
Thanks. pik

-----Original Message-----

From: [redacted] (OGC) (FBI) On Behalf Of CAPRONI, VALERIE E. (OGC) (FBI)
Sent: Monday, June 05, 2006 3:50 PM
To: FBI_ADs and EADs
Subject: Urgent request-DAG short-fused PIA tasking

Importance: High

UNCLASSIFIED
NON-RECORD

I very much need your assistance to meet a short-fused, very high-visibility DAG tasking that the FBI received yesterday. The tasking relates to requirements by DOJ (passing down requirements by OMB) that agencies must on a quarterly basis certify 90% completion (for all FBI systems) of Privacy Impact Assessments (PIAs) required by Section 208 of the E-Government Act (E-Gov). To meet the two deadlines imposed by DOJ, we will need completed inputs by affected divisions by 6/9 and 6/21, as described below.

The FBI has been doing our own PIAs for years, and we have known about the changes looming under E-Gov for many months. Indeed, many of you probably have already encountered the effects in your own programs, such as increased emphasis on PIAs appearing in procurement/IT management processes, and DD Pistole's EC of 5/15/06 (BUDED 6/5/2006) requiring each division to appoint a division privacy contact. We have, however, been long awaiting specific implementation guidance from DOJ, resolution of which was only recently provided thanks to the recent arrival of DOJ's new Chief Privacy and Civil Liberties Officer (Jane Horvath). This culminated in the 5/30/2006 DAG memo which we received yesterday (TRIM 06/DO/3020) directing the FBI to focus on the 28 FBI Law Enforcement systems on the FBI's 2006 FISMA inventory (see attached).

FISMA_LE_Spreads
heet (version ...

The FBI must complete a Privacy Threshold Analysis (PTA) for each system and, where so indicated by the PTA, we must also complete at least a short-form PIA.

OGC is responsible for coordinating the PIA process, and yesterday to meet this emergent requirement I directed internal detailing of OGC personnel to double our PIA-processing cadre, which will work exclusively on this tasking through completion.

But I can't emphasize strongly enough that PIA completion also depends on the absolutely essential contributions of knowledgeable program management in fully describing a system's structure, capabilities, and operations. Successful PIA completion thus must always entail a collaborative effort with program management (which may span several divisions, e.g., the system builder(s) and its end user(s)), and it is to this end that I ask you to direct and support the provision of priority assistance from your affected system sponsors, project officers, and other personnel as may be required to complete this tasking within DOJ's deadlines.

To do this, we need divisions to complete PTAs for their systems NLT next Friday (6/9) and complete any required short-form PIAs NLT Wednesday 6/21.

Unfortunately, the DOJ tasking also appears to require that we use newly implemented DOJ forms (attached for your reference are PTA and short-PIA forms):

Privacy Threshold Analysis Sho...
privacy_impact_assessment_shor...

(The long PIA form is here:

b2
b7E

Completion guidance is here:

Plus we need to submit the completed forms to DOJ for approval, which will require some departures from previous FBI SOP, and perhaps (and more irritatingly) some rewriting of previous drafts. (Hopefully, however, any previously prepared materials you may have prepared will prove susceptible to cutting/pasting into the new forms. And who knows, it may even be that, once the initial kinks are worked out, the new PIA process might even help make it easier and/or faster to complete and process PIAs., which would be nice, because there surely are more PIAs is all our futures.)

By separate e-mails, OGC's PIA staff will be communicating directly with the persons identified as POCs for each of the 28 FBI systems affected by this tasking. We will provide the division program POCs with the necessary forms for the program to complete (plus some additional questions we need for our review), and we will identify a designated OGC attorney to be OGC's POC for each system who will work with the division POCs to "smooth" the form(s) within the deadline(s).

My overall coordinator for this tasking is Senior Assistant General Counsel [redacted] [redacted] 202-324-[redacted] (Note there are now 3 [redacted] in the FBI. [redacted] internal e-mail address is [redacted] the only one in OGC), and his Internet e-mail address is [redacted]. Please don't hesitate to contact [redacted] my Deputy Pat Kelley (202-324-[redacted]) or me (202-324-[redacted]) you have any questions. Thanks in advance for your support!

<< File: FISMA_LE_Spreadsheet (version 2) fm Susan 5-30-06.xls >>

The FBI must complete a Privacy Threshold Analysis (PTA) for each system and, where so indicated by the PTA, we must also complete at least a short-form PIA.

OGC is responsible for coordinating the PIA process, and yesterday to meet this emergent requirement I directed internal detailing of OGC personnel to double our PIA-processing cadre, which will work exclusively on this tasking through completion.

But I can't emphasize strongly enough that PIA completion also depends on the absolutely essential contributions of knowledgeable program management in fully describing a system's structure, capabilities, and operations. Successful PIA completion thus must always entail a collaborative effort with program management (which may span several divisions, e.g., the system builder(s) and its end user(s)), and it is to this end that I ask you to direct and support the provision of priority assistance from your affected system sponsors, project officers, and other personnel as may be required to complete this tasking within DOJ's deadlines.

To do this, we need divisions to complete PTAs for their systems NLT next Friday (6/9) and complete any required short-form PIAs NLT Wednesday 6/21.

Unfortunately, the DOJ tasking also appears to require that we use newly implemented DOJ forms (attached for your reference are PTA and short-PIA forms):

<< File: Privacy Threshold Analysis.Short.Form.PIA.wpd >> << File: privacy_impact_assessment_short form template_90 cert.doc >>

(The long PIA form is here:

[Redacted]

Completion guidance is here:

[Redacted]

b2
b7E

Plus we need to submit the completed forms to DOJ for approval, which will require some departures from previous FBI SOP, and perhaps (and more irritatingly) some rewriting of previous drafts. (Hopefully, however, any previously prepared materials you may have

prepared will prove susceptible to cutting/pasting into the new forms. And who knows, it may even be that, once the initial kinks are worked out, the new PIA process might even help make it easier and/or faster to complete and process PIAs., which would be nice, because there surely are more PIAs is all our futures.)

By separate e-mails, OGC's PIA staff will be communicating directly with the persons identified as POCs for each of the 28 FBI systems affected by this tasking. We will provide the division program POCs with the necessary forms for the program to complete (plus some additional questions we need for our review), and we will identify a designated OGC attorney to be OGC's POC for each system who will work with the division POCs to "smooth" the form(s) within the deadline(s).

My overall coordinator for this tasking is Senior Assistant General Counsel [redacted] [redacted] 202-324-[redacted] (Note there are now 3 [redacted] in the FBI. [redacted] internal e-mail address is [redacted] the only one in OGC), and his Internet e-mail address is [redacted]. Please don't hesitate to contact [redacted] my Deputy Pat Kelley (202-324-[redacted]), or me (202-324-[redacted]) if you have any questions. Thanks in advance for your support!

FY08-030			
FY08-031 SMIS	Completed 10/10/05		Need to publish
FY08-032 FBI Digital Collection (DCS-3000, DCS-5000 and DCS-6000)	N/NSS		Collects audio, microphone, and fax intercepts. A PIA is not required pursuant to the E-Government Act because the FBI's Digital Collection Systems are considered national security systems. However, the FBI conducts internal PIAs on all national security systems to ensure that privacy rights are adequately considered in system development. A PIA was conducted and approved 8/27/2001 for the digital collection systems. OTD performed an upgrade to the system in July of 2005. By EC dated 12/22/2005, OGC advised that a supplemental PIA was not required, and that OGC should be consulted for any subsequent upgrades.
FY08-033 Administrative Systems Support	Yes, unless it is a NSS	Required. Possibly covered by existing but may need update	Will contain, among other things, BPMS & Personnel Background Mgmt System, both of which would contain personal info.
FY08-034			
FY08-035			
FY08-036 Network Services			b6 b7c
FY08-037 Records Management Application	N/NSS	Required. Exists but may need update	NSS (according to [redacted] chart)
FY08-038			
FY08-039 Operations Test and Evaluation Facility	Not required	Not required	As presented in the Exhibit 300, this investment will provide the FBI with an environment isolated from but representative of the FBI operational environment, for the conduct of independent verification and validation of all new or enhanced IT systems to be used within the FBI. No PIA is required for the establishment of OTEF, since of itself the OTEF is merely a testing environment that does not per se constitute a personal-information system or collection; indeed we would anticipate that many of the actual tests conducted would not involve personally identifiable information, e.g., if the tests merely involved technical stressing of an application or dummy data. (Note, though, that acquisition of the functionality being tested might require a PIA by the acquisition sponsor.) PIAs might be required for specific OTEF tests if the testing entailed OTEF's access to non-minor amounts of personally identifiable real data. (But even in such cases, it may be the most pragmatic solution would be to satisfy any PIA requirements by addressing OTEF testing in the underlying PIA for the system or procurement being tested.)

Attached please find electronic copies of the Privacy Threshold Analysis (PTA) forms for the four (4) Operational Technology Division systems identified as part of the twenty-eight (28) law enforcement systems on the FBI's 2006 FISMA inventory; specifically the Data Collection System 3000 (DCS-3000), the Field Office Integrated Security System, the Computer Analysis Response Team Storage Area Network (CARTSAN) and the Forensic Audio, Video and Image Analysis Unit Local Area Network (FAVIAU LAN). These are being forwarded to you per the June 5, 2006 e-mail attached below which requested they be forwarded to you "NLT" 6/9/06 (which was determine to mean "by close of business" 6/9/06 pursuant to a telephone conversation with OGC's [redacted]).

<< File: PTADCS3000.wpd >> << File: PTAFOISS.wpd >> << File: PTACARTSAN.wpd >>

<< File: PTAFVIAU.wpd >>

The original copies of the PTAs concerning the DCS-3000 and the Field Office Integrated Security System were sent to your attention today via Bumail. It is my understanding that pursuant to telephone conversations between the POCs for the CART SAN and FAVIAU LAN systems and OGC's [redacted] the original copies for those two PTAs were sent directly to [redacted] via Bureau mail.

Should you have any questions regarding this matter please don't hesitate to contact me.
Thanks

Subject: Urgent request-DAG short-fused PIA tasking
Importance: High

UNCLASSIFIED
NON-RECORD

I very much need your assistance to meet a short-fused, very high-visibility DAG tasking that the FBI received yesterday. The tasking relates to requirements by DOJ (passing down requirements by OMB) that agencies must on a quarterly basis certify 90% completion (for all FBI systems) of Privacy Impact Assessments (PIAs) required by Section 208 of the E-Government Act (E-Gov). To meet the two deadlines imposed by DOJ, we will need completed inputs by affected divisions by 6/9 and 6/21, as described below.

The FBI has been doing our own PIAs for years, and we have known about the changes looming under E-Gov for many months. Indeed, many of you probably have already encountered the effects in your own programs, such as increased emphasis on PIAs appearing in procurement/IT management processes, and DD Pistole's EC of 5/15/06 (BUDED 6/5/2006) requiring each division to appoint a division privacy contact. We have, however, been long awaiting specific implementation guidance from DOJ, resolution of which was only recently provided thanks to the recent arrival of DOJ's new Chief Privacy and Civil Liberties Officer (Jane Horvath). This culminated in the 5/30/2006 DAG memo which we received yesterday (TRIM 06/DO/3020) directing the FBI to focus on the 28 FBI Law Enforcement systems on

the FBI's 2006 FISMA inventory (see attached).

<< File: FISMA_LE_Spreadsheet (version 2) fm Susan 5-30-06.xls >>

The FBI must complete a Privacy Threshold Analysis (PTA) for each system and, where so indicated by the PTA, we must also complete at least a short-form PIA.

[redacted] Hope this provides what you need. If not, please let me know. If you need a more succinct or technical description, I'll provide it.

Glad we finally met. Thanks for your help [redacted]

Digital Collection consists of the DCS-3000, DCS-5000, and DCS-6000, which provide digital collection tools, foreign counterintelligence gathering, and law enforcement evidence collection, respectively. Digital Collection supports the FBI's mission to ensure the ability of the FBI to collect evidence and intelligence through the acquisition, deployment, and support of communications interception techniques and systems to facilitate and support national security, domestic counterterrorism, and criminal investigative efforts. Systems being acquired under the Digital Collection program include systems (foreign counterintelligence and law enforcement) that possess similar functions and capabilities to intercept telephone, microphone, and facsimile communications; however, the primary difference is law enforcement system's requirement to minimize collected communications. The passage of the Communication Assistance to Law Enforcement Act (CALEA), the implementation of state-of-the-art personal security features, and the explosion of telecommunication options (caller ID, call waiting, call conferencing, etc.) spotlighted the deficiencies of the legacy systems.

The Digital Collection Program provides the FBI with the means to collect evidence and intelligence through the acquisition, deployment, and support of communications interception techniques and systems which facilitate and support national security, domestic counterterrorism, and criminal investigative efforts. Systems provided through this program intercept multi-source digital (and analog) communications information for intelligence gathering for foreign counterintelligence activities and investigative purposes for providing evidence of criminal activity for trial. It should be noted that those systems used for criminal investigations possess a requirement to minimize intercepted voice sessions, (i.e., record only when the call is being actively monitored). Electronic information collected includes pen register (incoming and outgoing dialed digits, caller identification, date/time of communication, and other signal related information), analog and digital telephone calls, facsimile and modem transmissions, and microphone audio. High density drives and magneto-optical disks are utilized for temporary and permanent storage, respectively; no special, environmental storage facilities are needed. Digital Collection systems are used primarily by FBI field offices and Resident Agencies in support of active foreign intelligence and criminal cases. Support is also provided to other federal, state, local and tribal agencies, as required.

The Digital Collection Program has evolved during its life cycle and has become more complex. Even so, digital collection systems are computer-based systems comprised primarily of commercial-off-the-shelf hardware and software with limited proprietary application software. Incorporated technological advances allow Case Agents to easily and effectively manage the recordings electronically, which dramatically increases the efficiency of trial preparations. While each Field Office or Resident Agency is self-sustaining in its ability to process intercepted information, this program permits interconnectivity of all FCI systems via [redacted] a wide area network established to link field offices' central monitoring plants for the purpose of digital collection information sharing; it will use Trilogy's network backbone.) and TRILOGY (the FBI's enterprise wide area network being deployed to link field offices). This connectivity enables the transfer of electronic or digital files of intercepts to a remote or distant field office for special language translation/transcription and sharing of information among FBI offices and other partnering agencies. Systems are also installed as fixed systems in locations that require long-term, permanent operations. In many instances, intercepted audio is shared via a secure, wide area network or downloaded from computer memory onto removable media and provided to language specialists in offices around the country, greatly increasing productivity of FBI translation and transcription efforts.

Glad we finally met. Thanks for your help, [redacted]

Digital Collection consists of the DCS-3000, DCS-5000, and DCS-6000, which provide digital collection tools, foreign counterintelligence gathering, and law enforcement evidence collection, respectively. Digital Collection supports the FBI's mission to ensure the ability of the FBI to collect evidence and intelligence through the acquisition, deployment, and support of communications interception techniques and systems to facilitate and support national security, domestic counterterrorism, and criminal investigative efforts. Systems being acquired under the Digital Collection program include systems (foreign counterintelligence and law enforcement) that possess similar functions and capabilities to intercept telephone, microphone, and facsimile communications; however, the primary difference is law enforcement system's requirement to minimize collected communications. The passage of the Communication Assistance to Law Enforcement Act (CALEA), the implementation of state-of-the-art personal security features, and the explosion of telecommunication options (caller ID, call waiting, call conferencing, etc.) spotlighted the deficiencies of the legacy systems.

The Digital Collection Program provides the FBI with the means to collect evidence
Page 57

[redacted]-mails.txt
and intelligence through the acquisition, deployment, and support of communications interception techniques and systems which facilitate and support national security, domestic counterterrorism, and criminal investigative efforts. Systems provided through this program intercept multi-source digital (and analog) communications information for intelligence gathering for foreign counterintelligence activities and investigative purposes for providing evidence of criminal activity for trial. It should be noted that those systems used for criminal investigations possess a requirement to minimize intercepted voice sessions; (i.e. record only when the call is being actively monitored). Electronic information collected includes pen register (incoming and outgoing dialed digits, caller identification, date/time of communication, and other signal related information), analog and digital telephone calls, facsimile and modem transmissions, and microphone audio. High density drives and magneto-optical disks are utilized for temporary and permanent storage, respectively; no special, environmental storage facilities are needed. Digital Collection systems are used primarily by FBI field offices and Resident Agencies in support of active foreign intelligence and criminal cases. Support is also provided to other federal, state, local and tribal agencies, as required.

The Digital Collection Program has evolved during its life cycle and has become more complex. Even so, digital collection systems are computer-based systems comprised primarily of commercial-off-the-shelf hardware and software with limited proprietary application software. Incorporated technological advances allow Case Agents to easily and effectively manage the recordings electronically, which dramatically increases the efficiency of trial preparations. While each Field Office or Resident Agency is self-sustaining in its ability to process intercepted information, this program permits interconnectivity of all FCI systems via [redacted] a wide area network established to link field offices' central monitoring plants for the purpose of digital collection information sharing; it will use Trilogy's network backbone.) and TRILOGY (the FBI's enterprise wide area network being deployed to link field offices). This connectivity enables the transfer of electronic or digital files of intercepts to a remote or distant field office for special language translation/transcription and sharing of information among FBI offices and other partnering agencies. Systems are also installed as fixed systems in locations that require long-term, permanent operations. In many instances, intercepted audio is shared via a secure, wide area network or downloaded from computer memory onto removable media and provided to language specialists in offices around the country, greatly increasing productivity of FBI translation and transcription efforts.

UNCLASSIFIED

FY08-032 FBI Digital Collection (DCS-3000, DCS-5000 and DCS-6000)	Completed.	CRS	Collects audio, microphone, and fax intercepts. A PIA is not required pursuant to the E-Government Act because the FBI's Digital Collection Systems are considered national security systems. However, the FBI conducts internal PIAs on all national security systems to ensure that privacy rights are adequately considered in system development. A PIA was conducted and approved 8/27/2001 for the digital collection systems. OTD performed an upgrade to the system in July of 2005. By EC dated 12/22/2005, OGC advised that a supplemental PIA was not required, and that OGC should be consulted for any subsequent upgrades.
FY08-033 Administrative Systems Support	Yes, unless it is a NSS	Required. Possibly covered by existing but may need update	Will contain, among other things, BPMS & Personnel Background Mgmt System, both of which would contain personal info.
FY08-034 IDW Base	Y	CRS	Funding is requested to continue to expand and extend the set of IDW services and data provided. A PIA is not required pursuant to the E-Government Act because this is a national security system. However, the FBI conducts internal PIAs on all national security systems to ensure that privacy is adequately considered in system development. A series of PIAs have been conducted on IDW. Addition PIAs should be conducted as changes are made to the system.
FY08-035 Centralized Cable Plant Infrastructure	N (but see status/explanation)	N	<p>This investment funds the ongoing activities necessary to sustain the FBI HQ IT Centralized Cable Plant infrastructure. The cable plants are used to distribute the FBI's various networks to FBI facilities. As such, these projects do not involve the collection, maintenance or dissemination of identifiable data. Instead, they provide support for the networks that do transport data; as such no PIA/SORN required.</p> <p>Note - PIAs/SORNs are required for applications/service/content supported by the cable if these otherwise meet the PIA criteria.</p> <p>Note - E-300 mentions a cable management system (Visionael). If this system captures identifiable information a PIA may be required.</p> <p>Note- E-300 mentions an HQ IT trouble ticket management system- if only contains information about government employees, no E-government PIA required (internal system) but an FBI PIA is required.</p>

2	Bureau Personnel Management System (BPMS)	4 PTAs: (1). [redacted]
Here are some of the pics from the sysadmin room for our TIII/T50 equipment. Both the Voicebox network and [redacted] network are administered from that room. Our DCS3000 systems, an FBI net computer, the [redacted] ransportable system, all of our slave controllers and patch panels for our collection lines are contained in this one 9'x12' room. b2 b7E

On the 6' workstation we have the following Voicebox components (which are all minitowers):
Server [redacted] one AWS, two cisco routers, four modems, four UPS and two CRT Monitors,

We also have the following DCS3000 equipment on the same rack
[redacted] cpu, DCS3000 criminal cpu, DCS3000 FISA cpu, 4 por [redacted] an FBI net cpu, an HP Printer, 3 UPS, an Edgeport serial hub, our data intercept modem and firewalls/hubs, and a number of 3 ring binders.

Then in the double rack system on the left side as you enter the room we have all our rack mounted slave controller equipment, patch panels, latchbox panels, and other JSI legacy equipment.

I'm of the opinion that if we can wait on the equipment upgrade until we move into our new office it would save everyone a lot of work and headaches. If we have to go with the equipment upgrade right now we may want to coordinate the DCS3000 equipment upgrade so all we have to worry about finding a monitoring station for will be the FBI net cpu, the printer, all the non-rack mountable UPS, the modems and routers, the [redacted] the monitors (unless we can run everything but the FBI net cpu thru one 8 po [redacted] then we'd only have two monitors) and the binders.

Let us know what you think. I think the DCS3000 folks were considering waiting on our upgrade to rackmount until we move into the new office. Seems like we'd be doing the same work a second time inside of two years when we move to our new office.

Thanks John!

[redacted]

I've been asked to look into the possibility of extending our Charlotte-based VBIII network to an outlying offsite, about 5 miles away. I spoke with [redacted] while he was here this week updating our VBIII system and he said that remote workstations *could* be networked into the rack system at Charlotte. He also mentioned that Chicago was participating in a pilot project that accomplishes a similar objective.

We are only two TTAs here with no plant support so I am trying to get a handle on the complexity of this type of project. In general terms, what are the costs in time, money, personnel? How much coordination is involved with vendors, ERF, security division, physical facilities unit, local ETs, local security and physical plant personnel? What kinds of equipment would be necessary and who would spec the job and provide the gear and installation? From Chicago I understand that we would require, at minimum, the remote clients (provided by ERF via JSI), minimum 128K circuit between main site and remote (is this one circuit per client?), circuit for the DCS3000 (bandwidth required?), two routers (main site & client site provided by ERF), and a PIX Firewall (also provided by ERF). These are some of the questions I will need to find answers for before I give a response to our management regarding this proposal.

I appreciate any help you can provide. Thanks!

I just got back in the office so I apologize for not getting back with you sooner. As I would love to inform you of our testing of the remote VB clients, I unfortunately will be unable to reply in an expeditious manner at this time. I ask that you contact [redacted] (ERF) regarding this as he would have better information in most of the areas of question. I can then provide follow-up answers or possibly fill-in the blanks. In generic terms, here is what is involved:

b6
b7C

Remote Clients - Provided by ERF through vendor

Minimum 128K circuit between main site and remote (We have a separate T1 for one of our remote sites and the other we are using the T1 for the DCS3000) - Site would have to pickup cost

(2) Routers - (Main site & Client Site) - Provided by ERF

PIX Firewall - Provided by ERF

Time frame to setup once circuit is up is no more than two days (as long as there are no major issues)

Speaking with [redacted] this morning I believe the [redacted] issue was resolved.

I did receive a VoiceBox Review WS recently but we have not been able to get Pointsec loaded on it. We are working to acquire a more up to date version of Pointsec to see if will make a difference. Also we are short staffed at the moment and have been given numerous other priorities as each day unfolds. I am in NY this week and hope to be able to address the issue with Pointsec next week when I return.

Subject: Termination Attempt Messages with MIN

SENSITIVE BUT UNCLASSIFIED
NON-RECORD

All,
This is to recap the discussion/test that we did on the VB this morning. First, the problem statement: b2
b7E

Incoming calls where both target and associate are within the same switch for [redacted] may *only* populate the CALEA Termination Attempt message "Calling Party" identification field with the MIN (Mobile Identification Number). The MIN is not guaranteed to be the calling party's phone number (it is a valid 10 digit number) and is being populated in the VB as the CALLING PARTY'S phone number.

Through [redacted] analysis, it is seen that the subsequent "Network Signal" message has within it a "CALLING PARTY" field with the caller id of the calling party. This has come up in several cases and specifically I have had several conversations with the Chicago FO about the affect this has on their Title III's and requests for potential pens off this FALSE information.

The DCS 3000 currently looks for the "Calling Party" id in the Calling DN field only. This problem should be addressed with JSI for the VB and [redacted] for the [redacted]

[redacted] here is what I have so far for Chicago to be a test site for remote VoiceBox, we will need to move quickly for completion by the date we discussed earlier.

Discussed installation date of VoiceBox equipment and initial test. Begin on Monday July 10th.

Desired location is [redacted] with [redacted] as a second possible location.

Circuits would need to be operational before this time. Chicago may work with our DCS3000 lab in acquiring circuits if desired.

I believe that you informed me that Chicago does not have a circuit to the [redacted] at this time but may still have one for the [redacted]

I was also informed that Chicago would pay for the circuit to each location. The desired circuit for each would be a full T1.

You had mentioned that the circuits would be temporary and only for the operation of the specified case that the office will work. With the remote setup the circuit would need to remain up as long as case review was needed at the RA or the case could be processed at the Chicago FO once monitoring was over and a circuit discontinued.

Will Chicago be able to supply the AWS workstations from the FO to the remote sites for this test? I believe we had mentioned 4 AWSs for the remote site. ERF would also add a remote site repository machine with CDR capability and a printer.

Looking forward to your response.

b7C

Please ship toolbox back to ERF to TICTU [redacted]

A [redacted] and cables should be shipped from ERF to [redacted] to connect the both DCS3000 machine and the one way push LO side machine to the keyboard/monitor device

b2
b7E

JSI has an open ticket for the bad AWS 13 machine, they should be sending a replacement power supply

One of the [redacted]s bad, JSI will need to be called and start a trouble ticket on it to be repaired, most likely it will need to be sent to JSI in Sterling, VA. 866 [redacted]

I emailed instructions on how to setup VirusScan on the AWS machines, I was only able to do AWS1, the rest still need to be done

I told [redacted] that I called JSI and I am having them replace the screens for the AWS machines, you should be getting 14 new flat panel screens for the 14 AWS machines, they may come with built in speakers but don't use them, I here that the speaker portion works poorly. Try not to lose the new screens on other machines.

b6
b7C

I also am having JSI send a replacement for CDR2, the replacement will also record to DVD. Once the new system is in then the old CDR2 should be excessed, no more support will be available for it from ERF.

[redacted] got the new wiring in but the VB UPSs were tripping the breaker, he said that he would correct the problem with the breakers when he returns from vacation. Extension cords for the time being!

I spoke with [redacted] at JSI about trying to see if the Providence upgrade to 3.6 could be done soon, please follow up with JSI to see if it will be possible. 866 [redacted]
I will be out next week until Thursday.

Your [redacted] program will need to be loaded on the new VBSVR machine to remote control Providence

The old VoiceBox servers may be excessed or redistributed. ERF will no longer support any of these devices. You may need the front covers for the Providence system

Hi [redacted]

Thanks for your inquiry.

Yes, the briefing is high-level. The ITAB members are all Assistant Directors - from all FBIHQ divisions.

Attached is the template that the CIO established as the standard for all ITAB briefings. Use this as your guide and it is specific about the kind of information requested.

Hello [Redacted]

I have been tasked with putting together this presentation for TICTU/DCS [Redacted]. In your initial remail, you mentioned that you would be sending out a template for these presentations. If you have one, would you please forward it along to me? I know if you do have a template--that will be a good starting point for me to start working from.

[Redacted] also wanted me to ask the type of information you are looking for us to present? I see from your initial email that you want the presentation length to be around 20 minutes so it looks like you want to keep things at a high level.

Please advise. b6

 Subject: Chicago DCS IP plan

UNCLASSIFIED
NON-RECORD

Hi all,

There has been a slight change to the IP address plan for the Chicago move. We have temporarily allocated a new block of IPs to the old building and a new block to the new building. Here is the list of events that need to happen:

(S) 1. Add new block of IPs to old building [redacted] (7th RA)
this has already been done with the main router set for [redacted] use this as the gw)

- 2.a. Change the IPs for the portable VB at the old building to use the 7th RA scheme.
- b. Change the [redacted] one way push boxes at the old building to use the 7th RA scheme.

(S) 3. Install new circuit to new building with ip addresses of [redacted] (8th RA)
router will be installed with ip address [redacted] (use this as the gw)

b1
b2
b7E

- 4.a. VB at new building should be setup to use IPs for 8th RA scheme
- b. [redacted] one way push boxes at new building should be setup for 8th RA scheme

5. When Chicago is ready, move DCS-3000 machines and main FO IPs to the new building. No ip changes will need to be made to these machines.

- 6.a. Change VB IPs at new building to main FO IP scheme.
 - b. Change [redacted] one way push IPs to main FO IP scheme.
- *** note, the above step is optional, but recommended ***

7. When service at old building no longer needed, shut down circuit.

Going with this plan will make the transition much more simple. The drawbacks are having to change the VB and [redacted] addresses after the systems are up and running, or, if we skip step 6, then the waste of a block of IPs.

If anyone has any questions about this, please give me a call.
thanks!

Subject: Security Issues w/ ERF/TTA Networks

SENSITIVE BUT UNCLASSIFIED
NON-RECORD

Hello y'all - I'm seeking your advice to hopefully save a lot of work. [redacted] an ET in Dallas, just returned from Security training and has been designated the computer/network security person for our Division (ISSO?). He advised that HQ has mandated that he obtain all sorts of info from our systems/networks i.e: DCS 1000, DCS 3000, DCS 5000, DCS 6000 etc.

b6
b7C

[redacted] wants an accounting for all of the systems we, as TTAs & DCSPs, maintain. He wants to have diagrams, schematics, charts etc on what we have and how everything is connected. He wants lists of all of the general users and all of the limited/admin users.

b6
b7C

Is this duplicating what has already been done @ ERF w/ the security certification for each system? Or is there a new mandate to have this info on file w/ the specifics for each individual field office?

[redacted] also discussed restrictions regarding contractors and non employees working on, touching our systems. He even mentioned the phone company installers when they come to install/troubleshoot circuits etc. My understanding from this conversation is that they are not suppose to bring in computers, test equipment, etc that have memory etc. We are suppose to supply the computers/equipment for them to use.

b6
b7C

I know that when JSI comes to install our new VoiceBox, the week after next, that they will have their own computers, flash drives etc. I know that when [redacted] was just here to upgrade our database they brought in laptops. SBC [redacted] installers bring in test equipment & laptops [redacted] will have equipment to test the new DCS 3000 network connection in the new Frisco RA in the next couple of weeks.

How can we best handle this situation? Do I need to get a copies of the certification documents from ERF to give to [redacted] or should we just walk him through our system and have him make diagrams. Is there something in writing that I can read to better understand what I have to do when, SBC, [redacted] JSI, [redacted] etc come into our space?

b2
b7E

Any advice, comments etc would be helpful.

Given that JSI is coming here next week and since they made the systems (and we have absolutely no test equipment or knowledge of what the system settings should be) there is no rational alternative to them bringing their own stuff with them and to have complete access to the system. They of course will be escorted by CMP [redacted] during their visit.

Thanks [redacted] for suppling the dcs6000 ssp overview, [redacted] can get with [redacted] as Sys Admin or [redacted] as CMP mgr to get the list of Priv. users. I don't see the need for reinventing anyof this, if [redacted] wants other diagrams, he should be present at the end of the JSI visit when we go over all the system changes, links, etc.

I would suggest the time for that is at the end of the JSI install when we are repopulating the user lists. Any ideas?

[redacted] wants an accounting for all of the systems we, as TTAs & DCSPs, maintain. He wants to have diagrams, schematics, charts etc on what we have and how everything is connected. He wants lists of all of the general users and all of the limited/admin users.

Attached is the current SSP for the DCS6000 which should take care of the system diagrams and connections with much other information. The DCS6000 was accredited 3 years ago and is in the re-accreditation phase now, once this is completed we should have a new set of documents available in the summer or fall [redacted] should have a list of all of the privilege users and general users as well as the signed user forms from all of these user.

[redacted] also discussed restrictions regarding contractors and non employees working on, touching our systems. He even mentioned the phone company installers when they come to install/troubleshoot circuits etc. My understanding from this conversation is that they are not suppose to bring in computers, test equipment, etc that have memory etc. We are suppose to supply the computers/equipment for them to use.

The contractor equipment issue is technically correct but has been loosely enforced in the past. There is an EC that has been uploaded for the JSI foreign nationals to have access to the DCS6000 systems for installation and support and the SSP states that JSI personnel will need access to the system for support but must be escorted.

<< File: DCS6000_SSP_012506.doc >>

Overall the Bureau is working on trying to get all of its systems to be security accredited. But with the effort so far there are flaws. The documents that govern this process assumes that one standard fits all issues and also most personnel that are pulled into this effort and working towards the goals of compliance are learning as they go including the ones at the top.

The DCS6000 system is classified at Sensitive But Unclassified (SBU).

[redacted] will need to check with the Chief Security Officer for your division to find out if JSI can bring there devices and laptop that they need in and out for the installs before they come so JSI can be advised if they cannot.

I spoke with the DCS3000 guys about getting the pen data to Chelsea and they can do it. Instead of the way we discussed with just piping over from our side of the PIX they have a task force office solution that they developed for situations like this which will add an additional DCS machine in the main office that will act as a buffer for the task force pen data and prevent any possibility of snooping for other data. We will need to get a RMS in for this equipment to the DCS3000 team as soon as possible.

[redacted]

Reference our conversation Wednesday, 3/29/06, and my conversation with [redacted] at JSI, Monday, 3/27/06, regarding upgrading the New York Voicebox system to version 3.6 in the near future.

As requested, here's a recap of what we discussed regarding upgrading the New York VoiceBox system to version 3.6. As we all know, there is never an ideal time that will not cause any impact.

~~SECRET~~

(51)

From the standpoint of the impact on Title IIIs, New York is presently running approximately [redacted] collections, of which [redacted] are consensuals that run continuously. It would be unusual for us to have fewer IIIs that we currently have, and it is expected that all collections will increase due to an upcoming inspection scheduled for the Fall. During the last inspection we had [redacted] active Title IIIs, and a large number under review for trial.

To remove some of the pressure we have had in the past during upgrades, if we upgrade our [redacted] site first, we can move [redacted] collections to that site. It would allow our personnel to gain experience with the new version while the CMP site is upgraded. We also now have some VoiceBox equipment at our RAs that might be used if needed.

b2
b6
b7C
b7E

I have spoken with one of our ETs, and if it is ok with ERF to do so, we can route the VBIII pen data over to [redacted] using some spare bandwidth the ETs could provide on an existing link to Chelsea.

We have already sent [redacted] individuals through the version 3.6 training at JSI in Sterling, VA, so that should help during the switch to the new version.

Several cases are under review for trial, so we may need to export that data so the Agents have access to it if there is any long delay in completing the upgrade.

[redacted] JSI expressed that he is comfortable with upgrading us. Cleveland had a very large database that provided a basis for how long the New York upgrade may take.

[redacted] BAE - New York, is aware of the above and will be working on the [redacted] site to insure it is ready for the 3.6 upgrade (Service Pack installed, etc).

b6
b7C

I will be speaking with the Case Agents to let them know of the possibility of the upgrade and to see if there is anything else to consider from their standpoint.

OK -

It appears that as of last week the CDC was being sent with the audio. There was no delay. We ran it with the CDC and CCC split all weekend and the Admin Agen [redacted] monitored the timeliness of the CDC delivery and reported no delays. During this time she lost no audio, including during Call Waiting calls.

[Large redacted block]

b2
b7E

Everything appeared to work correctly until the audio was lost. So as not risk losing another pertinent call waiting call SA [redacted] requested the CCC and CDC be received separately. I switched the Title III back to separated CCC and CDC at 20:05. (2014 VoiceBox time)

Issue 3 -
I was speaking to SA [redacted] when I realized SA [redacted] was letting her T-III expire tonight 03/27/06 @ 23:59. SA [redacted] stops monitoring her two lines at midnight.

I decided to take this opportunity and reset the time on the VoiceBox system, since we are going up on another T-III 03/28/06 and possibly 3 more by the end of the week.

~~SECRET~~

I am going to do the shutdown process (workstations, RWS1&2, CD-R 1&2, Site Manager). Then reset the time on the Server. Then power everything back up in reverse order (one at a time). Hopefully this will correct the time issue.

If there are any problems then you will receive another email from me. Otherwise No email = no problems.

Thank you

[redacted]

This is tied primarily to future requests for money, 300 exhibits and requisition in FY07 and forward. However, the cost of each system should be looked at so we can determine our investment and support needs that are truly IT. We would like to know the cost of the part of each system that is IT (that allows our collection systems to connect to trilogy, operate remotely over an IT system, prepares data to be sent over/to an IT system).

I know this is a little vague but we need an estimate with some basis behind it.

Thanks

Marcus Thomas has asked that we determine the cost of the IT portions of the OTD collection systems listed on the OCIO master list of systems, applications, databases, and networks. For the systems/projects listed below, please determine or estimate as best you can the cost of the hardware, software, and the development work for the interface to the Trilogy network or other FBI IT infrastructure. This will help us separate the funding of National Security Systems that are not truly IT from IT systems, databases, applications and networks. Please provide an estimate by Friday 3/24.

In a recent discussion with the Office of the General Counsel, monitoring/collecting in different jurisdictions is not an issue. In *U.S. v. Denman*, 100 F.3d 399 (5th Cir. 1996) the court stated "(w)e agree with the reasoning of the Second Circuit and now hold that interception includes both the location of a tapped telephone and the original listening post, and that judges in either jurisdiction have authority under Title III to issue wiretap orders." The original citing for this came from *U.S. v. Rodriguez* 968 F.2d 130 (2d Cir. 1992). In this case, interception refers to where a communication is initially obtained regardless of where it is being heard. Also, to my knowledge the DEA has had no challenges to their hub (regional) collecting. I suggest you refer this matter to your CDC for additional guidance. The DCS-6000 team is still working on the technical end of making the remote workstation happen.

Per our discussion, here are some items of interest/or concern with regards to DCS6000 remote workstations. Also, I have talked with [redacted] and his is in agreement that Chicago would like to be a test site once this capability exists. We would be interested in an estimated time frame that this could happen and if there is anything that could be done to speed up the release of this technology.

Concerns/or Issues that may need to be addressed:

- Legal - Monitoring/collecting in different jurisdictions
- Network - Minimum bandwidth, encryption
- Security - Encryption, Accreditation

Possible requirements at a remote site:

- Computer(s) (DCS6000/3000)
- Router + (T1's (Network connection/data) and/or ISDN's)
- Remote Server

The VBIII upgrade equipment was delivered to the Yuma RA today. I expect that this delivery has no direct relationship to when the equipment will be installed, but that has not stoppe [redacted] and everyone else from asking about it.

Unless you tell me differently, I am under the assumption that ERF is still finalizing their install schedule & they have not yet given a Yuma install date.

Please let me know if I am off track so I can keep the wolves at bay.

Hi [redacted]

Thanks for getting back so soon. The DCS lines will be Calea and should be fairly easy to move over to the VB. It's just a matter of getting the Telco to comply in a timely fashion. They will "Ring-Down" the POTS as indicated. We will have to let them know what POTS lines to call. I believe [redacted] are working on a solution for the

~~SECRET~~

~~X~~ (90)

[redacted]

To further clarify your mission, two of the [redacted] lines currently under collection on the DCS 3000 will be routed into the VB for audio collection. If any prep work is necessary for the VB transition of these two lines in particular, let me know, so we can plan for it.

b6
b7C

Mathematically, that means we are bumping two current lines off the VB into the yet-to-be-determined alternate collection system.

Thanks for the assistance.

[redacted] found. There has been discussion of installing a rack mounted DNR with [redacted]. To be clear, my focus/support will be directed towards the Voice Box System not the alternate collection systems. During downtime I will be more than happy to provide any help I can with any tasks to complete the mission.

Regards,

[redacted] (EOSO)

Hello [redacted]

There have been recent upgrades to Telephone Apps that allow the upload of [redacted] data. The TS personnel in our office can now upload for the DCS3000 to TA directly [redacted] When these [redacted] targets go Title III, we move the [redacted] ver to the VoiceBox and there is no current report which is compatible for upload to TA. I have tried to modify the current VoiceBox [redacted] report with no luck. I do not know enough about the data that is captured by TA. Is there a plan to possibly have JSI create a report which can be uploaded to TA or will they have to continue to use hard copies of this data? This would be a great help to our folks here in Chicago.

Please let me know if I can be of any assistance.

Thanks,

[redacted] b2

Greetings Gentlemen,

I hope you had a peaceful Memorial Day Weekend.

I have attached my list of Switch addresses. Could you please review for correctness? I know you are constantly updating and changing switch addresses.

I did not have anything loaded in the BQ Voice Box for [redacted] and I was not sure if the [redacted] was still good. I did input both and was successful in pinging both.

b2
b7E

Based on the meetings last week, if I have either a [redacted] I am under the impression that I need to set up two CDCs for any [redacted] target. One CDC for [redacted] data and one CDC for [redacted] data.

If an [redacted] target is using [redacted] GSM network, do I also need to put the target up in a [redacted] CDC?

The CMP has already ordered the RTF for the [redacted] CALEA target. I have provided the CMP with the ring down number for the audio for the T-3. It is my understanding that the CMP will input the [redacted] CALEA pen data into the DCS-3000. You will establish a new IP address and provide me with the IP address, port number, etc. that I need so I can get the pen data in the RAs for [redacted] and Line CALEA.

I will be in the BQRA on Tuesday, but not at my desk. Please either call my cell phone 914 [redacted] or page me at 888 [redacted] cell phone does not work well in Server room.)

Thank you

[redacted]

[redacted] asked me to review the below thread and make a recommendation. After discussing with [redacted] here's what we came up with...

First, based on my recollection, the Voicebox is a portable system, but not necessarily a laptop. Second, since this Voicebox is NOT an FBI system that is being connected to a FBI system, it deserves some scrutiny from security, which I am sure that you have already done. We are assuming that this scenario may repeat itself in the future. Therefore, we feel that it would be appropriate for there to be a written operating procedure (most likely a page or two at most) that describes the following: 1) the Voicebox while attached to DCS 3000 will be under FBI control, 2) that appropriate safeguards are in place (listing safeguards), and 3) describing the sanitization process for ensuring that FBI data/information is not falling into the wrong hands when the Voicebox is removed from DCS 3000.

Once this is written and you review to ensure that it is adequate, we would ask that you please provide a copy of the operating procedure to the Accreditation Unit, so we can place it in the DCS 3000 C&A file for future reference. It would be the basis for future and similar request to do the same.

We did something similar to this (somewhat different circumstances) about 18 months ago involving a HIDTA operation in Denver. We agree that there is nothing here (at least on the surface) that would require any accreditation impact. We would just like it documented in the C&A file.

Hope this meets with your approval.

If you have any questions or would like to discuss, please let [redacted] or me know.

b6
b7c

Thanks!

Are you aware of the attached proposal to connect laptops to DCS3000? [redacted] asked if it changed the accreditation boundary - I would think there is a good chance it does.

SENSITIVE BUT UNCLASSIFIED
NON-RECORD

b6
b7c

[redacted]

Several months ago, I spoke to you regarding our task force squad that purchased its own Voicebox digital collection system and needed the OK from Security Division to use it on FBI cases. This is still in the works on our end, but we have a similar situation regarding a portable system and require the input of Security Division before we move forward.

Quantico ERF has supplied our division with a portable Voicebox system, but it is currently in use in our Toledo RA. The case agent in our Youngstown RA would like to conduct an upcoming FBI T-III on a digital system (rather than cassette tapes), but we do not have another system available (niether does ERF). The local HIDTA has purchased a portable Voicebox system and has agreed to let the Youngstown RA use it for this T-III. The system will be operated in the RA space and would be connected to our DCS-3000 network to obtain telephone target data. According to ERF, there is an acceptable configuration which enables secure transfer of the data. The issue arises in regards to conducting an FBI case on a system that is **not owned** by the FBI. As far as the data and audio that will be stored on the system is concerned, if necessary, we could remove the hard drives from the system before it is returned to HIDTA (replacements would have to be supplied by the FBI and software reloaded by the manufacturer).

From the security standpoint, can we use this system to conduct this upcoming T-III? Are there any other issues that must be resolved?

If you have any questions, please feel free to call me.

Thanks,

[redacted]

b7C

Also, I need to know which network [redacted] resides on.

The [redacted] is a self contained Windows domain network which functions as a tool for telecommunication interception used in Title III case work. The systems are developed and provided by a contracted vendor which specializes in this type of investigative tool. Each field office has a version of this network in place (varying in size according to need). Additionally a number of RAs have a system. The combination of these systems is reaching 100. The systems do have a firewalled link to the DCS3000 project which allows the systems to receive the Call Data Content record information from wireless technology intercepted calls. The systems run at the sensitive but unclassified level.

Gents,

After many internal discussion regarding the Certification and Accreditation (C&A) process of systems, we [AU, CU, and I] came to the conclusion that combining systems under one C&A makes sense (in some cases). I'd like to get your opinion on this matter as I'm looking to combine the collections systems (DCSnet, DCS 3000, 5000, 6000, and J3094) under one C&A (if that makes sense to do so).

I'd like to arrange a meeting for 13:30 tomorrow 19 January to discuss and collect your comments. We can meet in my office unless someone has a better alternative.

b6
b7C
b2
b7E

Also, I need to know which network [redacted] resides on.

The [redacted] is a self contained Windows domain network which functions as a tool for telecommunication interception used in Title III case work. The systems are developed and provided by a contracted vendor which specializes in this type of investigative tool. Each field office has a version of this network in place (varying in size according to need). Additionally a number of RAs have a system. The combination of these systems is reaching 100. The systems do have a firewalled link to the DCS3000 project which allows the systems to recieve the Call Data Content record information from wireless technology intercepted calls. The systems run at the sensitive but unclassified level.

Subject: Response to DCS6000 security inquiry

SENSITIVE BUT UNCLASSIFIED
NON-RECORD

b6
b7C

[redacted] requested that I respond to your inquiry of the progress of the DCS-6000 action plan. The duties of the ISSO for the DCS-6000 has been reassigned to myself in relief of [redacted] during July of 2004. We currently have 100 different DCS-6000 systems distributed between ERF and division field offices and resident agencies. Below I will address the actions items from the original EC.

The following actions should be completed by ITD:

C Establish and document standard physical access requirements for deployed systems within 90 days.

Each fielded system is being updated with the proper security features. This requires a onsite visit by the a Vendor representative to be implemented, which requires a coordination of schedules of Vendor and office personnel. If current Title III collections are ongoing then this requires after-hours scheduling. We have moved from 25% in July to 80% complete at this time. Our goal is to complete this process by March 31, 2005.

C Implement formal Change Management. In the interim, ensure all sites have an emergency repair disk that reflects the original configuration in addition to backup tapes.

The Change Management issue has been brought up to the vendor as a necessary of our security requirements. All changes to the systems come from the vendor and we are currently two software revisions below their current implementations. The vendor will start providing the process in the newer version. We have not moved to the newer software version due to the strain of maintaining the requirements of the accreditation process and the time that it takes to implement the changes throughout our environment. We will be looking at moving forward in the last half of FY05.

The vendor has a system of RAIDS and backups to opposite machines within the network for restoration operation. If a system must be restored, then the system must be returned to ERF for repair or a Vendor representative sent onsite. No tape backups are used, evidence that may be used for a case is stored in real-time on a pair of magneto optical disc. In the next version of software offline backup of software will be implemented.

C Implement a weekly security review to existing audit procedures. The Program Manager and/or the ISSO should review the Rules of Behavior and maintain signed copies for all users within 90 days.

Each system that has been updated has received a notebook detailing the SSP and associated documents. Rules of Behavior forms are included for privilege and general users. This notebook details procedures and responsibilities of onsite administrators and security personnel. The vendors procedures for managing audit logs is inconsistent and this issue has been brought up to them. They are working on correcting this issue, once the issue is resolved and implemented the procedures for reviewing and maintaining the audit logs will be standardized for field personnel.

The DCS3000, DCS5000 and DCS6000 are anticipated to merge into a network and will require a new C&A.

~~SECRET~~

(124)

~~126~~

~~SECRET~~

The DCS-6000 is currently accesses the DCS-3000 network for CDC call information. Each DCS-6000 network system requires a CISCO PIX firewall between itself and the DCS-3000. This firewall is strictly configured to allow only desired traffic to the designated machines within the DCS-6000 network.

The Information Technology Security Unit (ITSU) will provide verification to the AU of these actions in certification documents for the resulting new system. Maintaining a current accreditation status is subject to the continued adherence to the provisions of the SSP. In particular, all media copied or downloaded from the DCS6000 must be scanned for malicious code with the latest available virus scan updates before introducing information to any application residing on the FBI LAN/WAN.

It is our intention to begin the reworking of the SSP at the beginning of 2005 to conform to our operational requirements for the DCS-6000.

Over 90 % of the DCS-6000 system are running McAfee anti-virus software with 100% anticipated by completion of system updates in March of 2005.

At this time there is only one text file of data that may be exported for transfer over to the a FBI/WAN by diskette for upload into an application. Less than 20% of offices use this feature and they are required by standard operating procedures to scan this file before proceeding.

I currently have [Redacted] as the ISSO for the DCS 6000. Just as with the DCS 3000 I am now having to followup with the progress of the action plan for the DCS 6000. Attached is the EC which identifies the things that are supposed to be addressed. Could you work with the owners to determine if any of the items have been addressed, and if none, provide projected dates.

On the last trip up to Anchorage they wanted to test audio coming from ACS. The audio was fine but the call would not disconnect, had to manually disconnect the line. If you left the line open it actually would disconnect (it took about 1-2 minutes after the target went on hook. Is there any thing that can be done for this I know it is a known issue but is it being looked at to see if it can be corrected.

Also they were trying to get there VoiceBox to except the digit info from the DCS3000 but I needed the info to put in the screen (IP address and port)

Thank you

Some time ago I approached you, via an e-mail, regarding combining the ATO's for the DCS-family of computers (3000, 5000, 6000, DCSnet and J3094). You indicated that you'd like to get together to discuss the Tiers and LOC's for these systems, ultimately to determine if joining them made sense.

I haven't heard from you, so I thought I'd send a follow-up note to ask about your progress. When do you want to meet?

Cheers [redacted]

In regard to the Security issues that we discussed, please find a draft of the General User Rules of Behavior attached. I am still working the issue regarding the "Mission Exception" statement for a Task force.

As far as the connection to the DCS-3000, I am working with [redacted]. The SSP will have to be updated and put into the right format. Depending on the Levels of Concerns for the DCS-3000 and DCS-6000 and all of its external connections, the C&A or part of the C&A will have to be revalidated.

We are currently waiting on information for the DCS-3000 and DCSNet.

The DCS3000 column was in my mind to indicate connectivity between the DCS3000 and VoiceBox. I believe that most portables do not have the PIX to make that happen. Perhaps other systems out there are still without that connectivity as well.

That will be fine.

The notebook column is for a notebook that I am preparing for all sites that will include security information and procedure guides and other items for the VoiceBox system. I am working on putting one together and need to fine tune it before issuing it to the field.

I thought of putting a Version Number column at first but I didn't have all that info so I was just going to use the Yes/No choice to designate the systems that I knew were upgraded, but if your guys can fill in all that info with the current version number then that will be great.

What would be in the DCS3000 column, I know all division offices have connectivity and most RAs?

I am adding another column to your spreadsheet for DCS3000 connectivity. Since that is key to getting PEN data

~~132~~ (132)

and the Virus protection installed I think that it is valid. I think also that instead of the VB Updated column title that Version Number would work better.

I am curious what the Notebook Provided column is about. And I am guessing that the Schedule Date and Complete Date are for scheduling upgrades and new installs and to record what it actually slips to.

If you agree to the changes that I suggested I will forward this to the regional managers tomorrow.

Due to the Certification & Accreditation of the Voicebox System, its mandated that all VoiceBox workstations have Virus Scan software loaded and running. The attached file contains instructions for installation and setup on the Virus Scan software. The Virus Scan Software should be installed as soon as possible. When completed you must email [redacted] to inform him that virus scan is installed and running.

(S)

b1
b2
b7E

Your VoiceBox system must have a connection to the DCS network. This connection will allow your system to connect to the DCS 3000 Web page on the [redacted] machine. The Web page contains down loads for McAfee Virus Scan (for workstations running Windows 2000 Professional) and Netshield (for Windows 2000 Server). The connection will also allow the Virus Scan software to update automatically.

If you have questions please contact:

[redacted] 703 [redacted]
[redacted] 703 [redacted]
[redacted] 703 [redacted]

b6
b7C

[redacted] if you could send this to [redacted] to request that the DCSP personnel in the field could preform this task.

Thank you
