Gents,

After many internal discussion regarding the Certification and Accreditation (C&A)
process of systems, we [AU, CU, and I] came to the conclusion that combining
systems under one C&A makes sense (in some cases). I'd like to get your opinion
on this matter as I'm looking to combine the collections systems (DCSnet, DCS
3000, 5000, 6000, and [redacted] under one C&A (if that makes sense to do so).
I'd like to arrange a meeting for 13:30 tomorrow 19 January to discuss and collect
your comments. We can meet in my office unless someone has a better alternative.

[____] and [____]

I'm not sure we're the right group to answer question number 8 since we do not conduct Title IIIs or FISAs (we provide support for these operations upon requests from the field). Divisions 5 and 6 should have these numbers - CALEA was enacted in October 1994 [_____] as a list of Title-IIIs for each fiscal year by field office. There is an annual unclassified disclosure of FISA applications published by the DOJ, but the actual number of FISA targets

✗

(4)

and intercepts is classified secret and is treated as "need-to-know only" information - and I don't know.

Information from the annual unclassified FISA report [   ]

Year   FISA Applications Submitted

1996   839
1997   749
1998   796
1999   886
2000   1005
2001   932
2002   1228
2003   1727

ITD has provided the DCS-3000 CALEA pen-register and trap/trace data collection system to more than 50 federal, state, and local law enforcement agencies to assist with CALEA based intercepts. The following are examples of the agencies that ITD has assisted in this regard:

Local Law Enforcement	State Law Enforcement	Federal Law Enforcement

I hope this helps,

[   ]

*Recurring cost

Amounts are based, in part, on numbers of networking equipment and costs provided by [redacted] for [redacted] systems in field offices and resident agencies.

(2) SBIT's Input from [redacted]
The cost of the hardware, software, and the development work for the interface to the Trilogy network or other FBI IT infrastructure for the DCS-3000 system is approximately $750,000 per year. The majority of this cost is for hardware (e.g. routers and other networking equipment). The DCSnet costs are approximately $500,000 per year if you include the IP service contract we have with [redacted] [redacted] an elaborate on this topic if needed.

RMS# 105654 - Previously submitted requesting DCS6000 remote capability (Assigned to [   ] - Status is Working

[   ]

Per our discussion, here are some items of interest/or concern with regards to DCS6000 remote workstations. Also, I have talked with [   ] and his is in agreement that Chicago would like to be a test site once this capability exists. We would be interested in an estimated time frame that this could happen and if there is anything that could be done to speed up the release of this technology.

Concerns/or Issues that may need to be addressed:

Legal - Monitoring/collecting in different jurisdictions
Network - Minimum bandwidth, encryption
Security - Encryption, Accreditation

b6
b7C

Possible requirements at a remote site:

Computer(s) (DCS6000/3000)
Router + (T1's (Network connection/data) and/or ISDN's)
Remote Server

ETMU is coordinating with TA on electronically passing the pen register data from EDMS to TA.

Of equal importance is the ability to setup and update TA with the current court order information. OTD's Telecommunications Intercept and Collection Technology Unit (TICTU) and ETMU have approached the FISA Management Unit regarding electronically passing FISA court order information.

The first new employee orientation in 2005 is scheduled for May 10 - 12. Your involvement in 2004 was a key factor in the success of all orientations conducted. As our team continues to merge over the coming months I shall appreciate your feedback and involvement in continual enhancements to the orientation program. As evidenced by orientation survey results and management feedback, new employees are being assimilated more effectively and expeditiously.

X   (18)   ~~SECRET~~

The Agenda is attached for your review. I hope that your schedule will allow you to participate. The technology manager portion of the program is scheduled for Wednesday 11 May from 1:45-2:45 and 3:00 to 4:00 (a short break scheduled between sessions). Please let me know if you (or a designated alternate) would be available to provide an overview of the following systems:

Time	System
1:45 - 2:15	DCS3000
2:15 - 2:45	
2:45 - 3:00	Break
3:00 - 3:30	DCS5000
3:30 - 4:00	DCS6000

For planning purposes the remaining 2005 orientations are scheduled for: August 9-11 and November 8-10.

Thanks in advance for your time. I look forward to your feedback on the agenda and your participation. Please call me with any questions you may have.

Regards,

[____]

Several months ago, I spoke to you regarding our task force squad that purchased its own Voicebox
digital collection system and needed the OK from Security Division to use it on FBI cases. This is still in
the works on our end, but we have a similar situation regarding a **portable** system and require the input
of Security Division before we move forward.

Quantico ERF has supplied our division with a portable Voicebox system, but it is currently in use in our
Toledo RA. The case agent in our Youngstown RA would like to conduct an upcoming FBI T-III on a
digital system (rather than cassette tapes), but we do not have another system available (niether does
ERF). The local HIDTA has purchased a portable Voicebox system and has agreed to let the
Youngstown RA use it for this T-III. The system will be operated in the RA space and would be
connected to our DCS-3000 network to obtain telephone target data. According to ERF, there is an
acceptable configuration which enables secure transfer of the data. [____]

H[____]

I just wanted to extend my gratitude to [_____] for the operational support he is providing. Specifically, [____] is instrumental in helping with the development and deployment of the DCS-3000 One Way Push system. SLC was the first official test site approved from the security office which assisted us in order to determine the robustness of our system. It was during this test phase that improvements were developed by Raytheon and incorporated into our latest TIU Software base-line. The new software enables the CCC and CDC data to be correlated using a time-based algorithm. A vast improvement from hard copies and manual correlation. Although the new software hasn't been validated, [_____] continues to provide us with invaluable information. His efforts continue to help us gain great strides as we begin to establish new operations throughout the field. His expertise and knowledge has assisted us in completing our initial goals. We are fortunate to have him on our side. More than thanks are truly in order.

Regards,

I'm glad that you can participate. The only thing you would need is the presentation on media, we will have a laptop set-up. Do you know who will come with you so that I can add them to the visitor list? I will alert the CSOC that the systems will be used for demonstration that afternoon.

[   ]

This should not be a problem. Since the first part of the presentation is usually lecture and the second part demonstration, I believe it best if the first part be given for both programs, followed by demos of the collection platforms. I will most likely be involved (power point presentation) with additional individuals from both programs showing the equipment. Do you need us to bring anything?

I think it is a great tool for remote access. Currently being utilized by others with great success. Full support from here.
Thanks,

3

Subject:	Response to DCS6000 security inquiry

b6
b7C

<u>SENSITIVE BUT UNCLASSIFIED</u>
<u>NON-RECORD</u>

_____

b2
b6
b7C
b7E

_____ requested that I respond to your inquiry of the progress of the DCS-6000 action plan. The duties of the ISSO for the DCS-6000 has been reassigned to myself in relief of _____ during July of 2004. We currently have _____ different DCS-6000 systems distributed between ERF and division field offices and resident agencies. Below I will address the actions items from the original EC.

The following actions should be completed by ITD:

    C Establish and document standard physical access requirements for deployed systems within 90 days.

    Each fielded system is being updated with the proper security features. This requires a onsite visit by the a Vendor representative to be implemented, which requires a coordination of schedules of Vendor and office personnel. If current Title III collections are ongoing then this requires after-hours scheduling. We have moved from 25% in July to 80% complete at this time. Our goal is to complete this process by March 31, 2005.

    C Implement formal Change Management. In the interim, ensure all sites have an emergency repair disk that reflects the original configuration in addition to backup tapes.

    The Change Management issue has been brought up to the vendor as a necessary of our security requirements. All changes to the systems come from the vendor and we are currently two software revisions below their current implementations. The vendor will start providing the process in the newer version. We have not moved to the newer software version due to the strain of maintaining the requirements of the accreditation process and the time that it takes to implement the changes throughout our environment. We will be looking at moving forward in the last half of FY05.

    The vendor has a system of RAIDS and backups to opposite machines within the network for restoration operation. If a system must be restored, then the system must be returned to ERF for repair or a Vendor representative sent onsite. No tape backups are used, evidence that may be used for a case is stored in real-time on a pair of magneto optical disc. In the next version of software offline backup of software will be implemented.

    C Implement a weekly security review to existing audit procedures. The Program Manager and/or the ISSO should review the Rules of Behavior and maintain signed copies for all users within 90 days.

    Each system that has been updated has received a notebook detailing the SSP and associated documents. Rules of Behavior forms are included for privilege and general users. This notebook details procedures and responsibilities of onsite administrators and security personnel. The vendors procedures for managing audit logs is inconsistent and this issue has been brought up to them. They are working on correcting this issue, once the issue is resolved and implemented the procedures for reviewing and maintaining the audit logs will be standardized for field personnel.

The DCS3000, DCS5000 and DCS6000 are anticipated to merge into a network and will require a new

1

C&A.

- The DCS-6000 is currently accesses the DCS-3000 network for CDC call information. Each DCS-6000 network system requires a CISCO PIX firewall between itself and the DCS-3000. This firewall is strictly configured to allow only desired traffic to the designated machines within the DCS-6000 network.

The Information Technology Security Unit (ITSU)will provide verification to the AU of these actions in certification documents for the resulting new system. Maintaining a current accreditation status is subject to the continued adherence to the provisions of the SSP. In particular, all media copied or downloaded from the DCS6000 must be scanned for malicious code with the latest available virus scan updates before introducing information to any application residing on the FBI LAN/WAN.

- It is our intention to begin the reworking of the SSP at the beginning of 2005 to conform to our operational requirements for the DCS-6000.
- Over 90 % of the DCS-6000 system are running McAfee anti-virus software with 100% anticipated by completion of system updates in March of 2005.
- At this time there is only one text file of data that may be exported for transfer over to the a FBI/WAN by diskette for upload into an application. Less than 20% of offices use this feature and they are required by standard operating procedures to scan this file before proceeding.

Hello Guys,
I sincerely hope that I did not leave anyone out of this e-mail who participated in this task. I wanted to express my personal appreciation for a job well done in completing this assignment. From all of the e-mail traffic, I can see that this goes all the way up to the EAD FBI and on to the Department of Justice. It takes a strong dedicated team to accomplish task after task without complaint. I'm proud to be a part of such a great group of men and women dedicated to the cause. Thanks for holding the line and standing in the gap in my absence. I look forward to getting back and rolling up my sleeves!

Again great job as we move towards raising the bar up to the next level!

☐☐☐☐☐

This is the DCS-5000 & DCS-6000 programs response:

VOICEBOX. All Field Offices and a number of RA's have increased their abilities in Title III intercept collections by the implementation of digital, computer based collection platforms. During this time telecommunication intercepts have migrated from tape based audio recordings with manual cataloging of related data and documents to a Microsoft Windows based system that enables the audio, data and documents to be captured together and stored within a relational database. This configuration allows for easy retrieval and analysis of the information which enhances the ability of case agents to perform their duties efficiently and effectively. The DCS-6000 program has also been able to accommodate many smaller RAs and joint task force operations with a portable collection systems. With this portable system the RAs are able to move the collection and monitoring of the T-III operations to a facility that can better suit their needs. The usability of VoiceBox is applauded by the personnel using it throughout the organization. Since 2001, 68 systems have been deployed to the field.
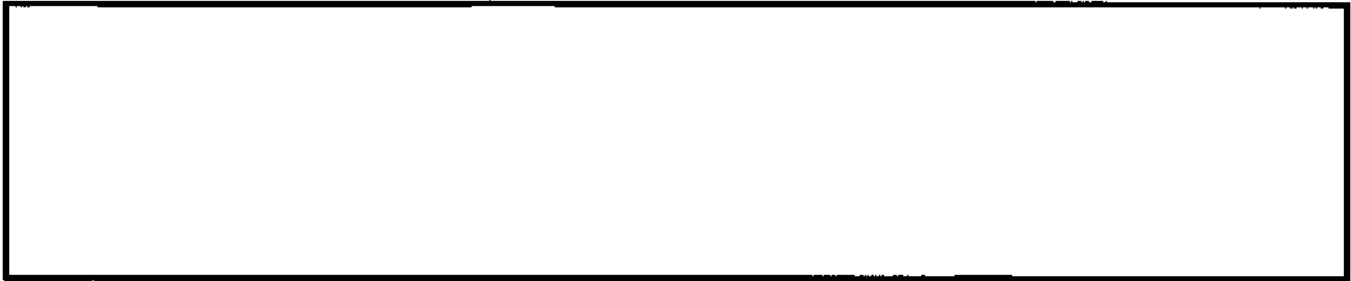

ONE WAY PUSH. Prior to the development of the One Way Push system, vital CALEA data could not be imported directly from the DCS-3000 systems into Red Wolf due to the security constraints of the DCS-3000. Consequently, Red Wolf was not fully CALEA capable. The One Way Push meets security challenges head-on through an architecture that employs a "low" and "high" side server   When installed, the One Way Push allows for the full integration of CALEA data into the Red Wolf, exponentially increasing its capability.

WORK FLOW MANAGER. Work Flow Manager is capable of providing critical management information to Language Services personnel and case managers throughout the FISA collection community. Work Flow Manager implements the ability to monitor and provide reporting for all audio sessions received, transferred, transcribed, and stored. Additional effort is being applied to Work Flow Manager in order to satisfy Language Services requirements for enhanced statistics and information reporting.

Hi [REDACTED]

I just wanted to extend my gratitude to [REDACTED] for the operational support he is providing. Specifically, [REDACTED] is instrumental in helping with the development and deployment of the DCS-3000 One Way Push system. SLC was the first official test site approved from the security office which assisted us in order to determine the robustness of our system. It was during this test phase that improvements were developed by Raytheon and incorporated into our latest TIU Software base-line. The new software enables the CCC and CDC data to be correlated using a time-based algorithm. A vast improvement from hard copies and manual correlation. Although the new software hasn't been validated, [REDACTED] continues to provide us with invaluable information. His efforts continue to help us gain great strides as we begin to establish new operations throughout the field. His expertise and knowledge has assisted us in completing our initial goals. We are fortunate to have him on our side. More than thanks are truly in order.

Regards

[REDACTED]

UNCLASSIFIED

NON-RECORD

[REDACTED]

DATE: 06-12-2007
CLASSIFIED BY 65179 DMH/TAM/KSR/JB
REASON: 1.4 (g)
DECLASSIFY ON: 06-12-2032

ALL INFORMATION CONTAINED
HEREIN IS UNCLASSIFIED EXCEPT
WHERE SHOWN OTHERWISE

Per our telephone conversation earlier today, please refer to attached ECs (one document requesting purchase approval from the Sacramento Division [SACTO1.EC] and another document granting the approval from FBIHQ). Our approving document (attachment labeled "moneyauthec 08132004.wpd") got kicked back by the Acting Section Chief here, who

wanted to know if there were any concerns from the Collection Technologies Team, Telecommunications Intercept and Collection Technology Unit (TICTU), Electronic Surveillance Technology Section, ITD regarding:

    a) Is there any proprietary interest problem in allowing the Sacramento County Sheriff's Office to purchase this equipment? and

    b) Is the Bureau allowed to purchase Title III digital collection equipment that is not a component of the DCS 3000 (or whatever is the current moniker for the ol[   ]ystem)?

b2
b7E

I told him that I was pretty sure that the FBI had no proprietary interest over a Hewlett Packard Magneto Optical Jukebox, and I know that JSI is selling collection systems formerly used by the Bureau to state and local law enforcement agencies around the country. However, I am not so sure about procurement rules regarding the purchase of non-DCS collection equipment. I am not a computer systems expert, but I think an MO jukebox is a pretty standard peripheral device, which possibly could be integrated into any digital collection system with the right software.

The goal here is to help the Sacramento County Sheriff's Office upgrade their system for the benefit of the entire HIDTA task force of which Sacramento FBI is a member. The Sacramento County Sheriff's Office is the lead agency in this task force, and Sacramento FBI would benefit from its purchase. Can we get your concurrence for Sacramento to make this purchase? The funding is available through OCDETF, and Sacramento qualifies for this funding by participating in OCDETF investigations.

I am also faxing you a copy of the price quote given to the Sacramento County Sheriff's Office from Penlink, Ltd. for the system upgrade. The Sacramento County Sheriff's Office has arranged alternative funding for the rest of the upgrade, except for the MO Jukebox. Please e-mail me or call me back regarding this issue.

Thanks

Guys,

The question continues to pop-up, how does the field handle FISA information; classified. or unclassified? Can we develop a procedure regarding the proper handling and transfer of data thru the DCS-3000 One Way Push into the [   ]? Or use an alternate approach?

b2
b7E

Pokey mentioned the possibility of using EDMS for each region and automajically download the Tel Apps. This may be a viable option? More details will be need for a discussion.

Other suggestions? Any way to provide the field with an answer?

Thnx,
-C

Mr.. Clifford,

I am the Technical Advisor for the Honolulu Division as well as the System Administrator for the Red Wolf FCI collection system. I have been involved in the DMW collection system since 1994. During that time I have seen the evolution of the FCI digital collection system and have been impressed with the productivity that our LS's are doing since we went digital.

I have nothing on paper explaining to me and the FCI squad what the CSOC is, what they are doing and what their ultimate responsibilities are. I have been recently advised that CSOC accesses the [_____] system twice a day to do health monitoring without my knowledge.

assurances that my system cannot be compromised by some one who does not have a need to know.

I guess that I have been ranting and raving enough about the security issue. I could go on but will be babbling soon.

Thank you for your time.

Aloha,
SA [redacted]

[   ] Hope this provides what you need. If not, please let me know. If you need a more succinct or technical description, I'll provide it.

Glad we finally met. Thanks for your help [   ]

Digital Collection consists of the DCS-3000, DCS-5000, and DCS-6000, which provide digital collection tools, foreign counterintelligence gathering, and law enforcement evidence collection, respectively. Digital Collection supports the FBI's mission to ensure the ability of the FBI to collect evidence and intelligence through the acquisition, deployment, and support of communications interception techniques and systems to facilitate and support national security, domestic counterterrorism, and criminal investigative efforts. Systems being acquired under the Digital Collection program include systems (foreign counterintelligence and law enforcement) that possess similar functions and [   ] however, the primary difference is law enforcement system's requirement to minimize collected communications. The passage of the Communication Assistance to Law Enforcement Act (CALEA), the implementation of state-of-the-art personal security features, and the explosion of telecommunication options (caller ID, call waiting, call conferencing, etc.) spotlighted the deficiencies of the legacy systems.

b2
b7E

The Digital Collection Program provides the FBI with the means to collect evidence and intelligence through the acquisition, deployment, and support of communications interception techniques and systems which facilitate and support national security, domestic counterterrorism, and criminal investigative efforts. Systems provided through this program intercept multi-source digital (and analog) communications information for intelligence gathering for foreign counterintelligence activities and investigative purposes for providing evidence of criminal activity for trial. It should be noted that those systems used for criminal investigations possess a requirement to minimize intercepted voice sessions, (i.e., record only when the call is being actively monitored). Electronic information collected includes pen register (incoming and outgoing dialed digits, caller identification, date/time of communication, and other signal related information), analog and digital telephone calls [   ] igh density drives and magneto-optical disks are utilized for temporary and permanent storage, respectively, no special, environmental storage facilities are needed. Digital Collection systems are used primarily by FBI field offices and Resident Agencies in support of active foreign intelligence and criminal cases. Support is also provided to other federal, state, local and tribal agencies, as required.

The Digital Collection Program has evolved during its life cycle and has become more complex. Even so, digital collection systems are computer-based systems comprised primarily

(1)   X

of commercial-off-the-shelf hardware and software with limited proprietary application software. Incorporated technological advances allow Case Agents to easily and effectively manage the recordings electronically, which dramatically increases the efficiency of trial preparations. While each Field Office or Resident Agency is self-sustaining in its ability to process intercepted information, this program permits interconnectivity of all FCI systems via [   ] a wide area network established to link field offices' central monitoring plants for the purpose of digital collection information sharing; it will use Trilogy's network backbone.) and TRILOGY (the FBI's enterprise wide area network being deployed to link field offices). This connectivity enables the transfer of electronic or digital files of intercepts to a remote or distant field office for special language translation/transcription and sharing of information among FBI offices and other partnering agencies. Systems are also installed as fixed systems in locations that require long-term, permanent operations. In many instances, intercepted audio is shared via a secure, wide area network or downloaded from computer memory onto removable media and provided to language specialists in offices around the country, greatly increasing productivity of FBI translation and transcription efforts.

During the Houston office closure during hurricane Rita I installed a DCS 3000 in the [____] and prepared the VB III for a pending case. The system is prepared to collect for New Orleans if need be. As far as the T-50 system I am waiting to see what NO decides to do. We will be sure to be available to install the system and get it going for them when they are ready and know where its going to be. When I have any further updates I will be sure to include you in the communications. We really dodged a big one by Rita going through SE Texas instead of Galveston and Houston.

Would ya'll forward this to whom ever you may think needs it, especially in the TICTU realm. Tomorrow, space management and FBI movers will commence moving all of our TA/ET/CMP equipment from New Orleans to our new offsite located at [redacted] This includes moving all CMP equipment (Voice Box, DCS3000, Red Wolf,etc).
During this move I am sure things will be damaged. We cannot leave anything in place for space management is to begin gutting our entire field office next week. In a perfect world, we will be back in our New Orleans office by the end of May, or early June '06. In the interim our division will be scattered in bldgs from Covington, LA to Baton Rouge, with Baton Rouge having several bldgs housing different programs. I have asked TTA [redacted] to contact TICTU, et al to help set up temporary DCS 3000, etc in our [redacted] As for as any CMP down here, I do not know at this time how that will evolve, but once we get all equipment up here in BR, perhaps BAE could send some contractor types to check out all of our equipment. Also, I am sure we will have to surplus equipment but we will take it one step at a time.

[redacted] - I may ask for a few TTAs in the next week or so to come and help set up our new space. There is a TR# associated with this that I will get for you if/when needed. Lodging is still an issue and anyone who comes should be prepared to sleep in TRU tents (A/C'd) or in our new space on cots. Just let those interested in coming what the conditions are. I will speak with you more on this when the time comes. I am the only TTA in NO that did not have significant damage t my house. All others are out til at least 10/1 on admin leave.

That's it for now. I'll keep you posted.

Glad we finally met. Thanks for your help [ ]

Digital Collection consists of the DCS-3000, DCS-5000, and DCS-6000, which provide digital collection tools, foreign counterintelligence gathering, and law enforcement evidence collection, respectively. Digital Collection supports the FBI's mission to ensure the ability of the FBI to collect evidence and intelligence through the acquisition, deployment, and support of communications interception techniques and systems to facilitate and support national security, domestic counterterrorism, and criminal investigative efforts. Systems being acquired under the Digital Collection program include systems (foreign counterintelligence and law enforcement) that possess similar functions and capabilities t[ ]however, the primary difference is law enforcement system's requirement to minimize collected communications. The passage of the Communication Assistance to Law Enforcement Act (CALEA), the implementation of state-of-the-art personal security features, and the explosion of telecommunication options (caller ID, call waiting, call conferencing, etc.) spotlighted the deficiencies of the legacy systems.

b2
b7E

The Digital Collection Program provides the FBI with the means to collect evidence and intelligence through the acquisition, deployment, and support of communications interception techniques and systems which facilitate and support national security, domestic counterterrorism, and criminal investigative efforts. Systems provided through this program intercept multi-source digital (and analog) communications information for intelligence gathering for foreign counterintelligence activities and investigative purposes for providing evidence of criminal activity for trial. It should be noted that those systems used for criminal investigations possess a requirement to minimize intercepted voice sessions, (i.e., record only when the call is being actively monitored). Electronic information collected includes pen register (incoming and outgoing dialed digits, caller identification, date/time of communication, and other signal related information), analog and digital telephone calls[ ]gh density drives and magneto-optical disks are utilized for temporary and permanent storage, respectively; no special,

✗ (6)

environmental storage facilities are needed. Digital Collection systems are used primarily by FBI field offices and Resident Agencies in support of active foreign intelligence and criminal cases. Support is also provided to other federal, state, local and tribal agencies, as required.

The Digital Collection Program has evolved during its life cycle and has become more complex. Even so, digital collection systems are computer-based systems comprised primarily of commercial-off-the-shelf hardware and software with limited proprietary application software. Incorporated technological advances allow Case Agents to easily and effectively manage the recordings electronically, which dramatically increases the efficiency of trial preparations. While each Field Office or Resident Agency is self-sustaining in its ability to process intercepted information, this program permits interconnectivity of all FCI systems via [_____] a wide area network established to link field offices' central monitoring plants for the purpose of digital collection information sharing; it will use Trilogy's network backbone.) and TRILOGY (the FBI's enterprise wide area network being deployed to link field offices). This connectivity enables the transfer of electronic or digital files of intercepts to a remote or distant field office for special language translation/transcription and sharing of information among FBI offices and other partnering agencies. Systems are also installed as fixed systems in locations that require long-term, permanent operations. In many instances, intercepted audio is shared via a secure, wide area network or downloaded from computer memory onto removable media and provided to language specialists in offices around the country, greatly increasing productivity of FBI translation and transcription efforts.

That helps -
I would strongly recommend that we only install those workstation required - one or two extra is fine.
But we can't deploy workstations based on future projected requirements. We can generally respond quickly to additional WS requirements and have them on site within a week or two.

If you have information re long term (>6months out) plans -
please share that with us so we can prepare for such issues as database server upgrades etc.
But let's not base major system upgrades on things that MAY happen.

Often things change - VERY often.

Thanx

We need to discuss the removal of the RW system from the NO site.   I spoke to [_____] NO) yesterday. He informed that the workstations have been removed from the site and stored elsewhere, but the system is still intact there in the CMP. It is powered down and wrapped/covered with a plastic tarp.   Do we want to send a crew down to remove the system (preserve the hard drives, etc.)? Do we want to have it shipped here to ERF, to another site?   ????

[____]

I just wanted to follow up on our meeting regarding the automation of uploading phone records to enterprise-level systems at HQ. I know ERF/ETMU was working this issue and expected an interim solution by August 31. Is the issue resolved as scheduled?

A short list would include:

   1. Provide automated uploading from DCS-3000 to telephone applications.

   2. Currently, we cannot upload pen register information from Primary Rate ISDN lines using a [____] or the intercep [____] or telephone service.

3. Provide automated uploading from the RedWolf collection system to telephone applications.

Subject: RE: 2005 ETMU (fka EOSO) New Employee Orientation Agenda May 10-12

Please advise if you or a representative will be able to participate in the upcoming May Orientation as outlined below. I look forward to hearing from you. If you could respond at your earliest convenience I shall appreciate it. I will incorporate the updates and forward the final agenda to you.

Thank you!

⬛⬛⬛

The first new employee orientation in 2005 is scheduled for May 10 - 12. Your involvement in 2004 was a key factor in the success of all orientations conducted. As our team continues to merge over the coming months I shall appreciate your feedback and involvement in continual enhancements to the orientation program. As evidenced by orientation survey results and management feedback, new employees are being assimilated more effectively and expeditiously.

The Agenda is attached for your review. I hope that your schedule will allow you to participate. The technology manager portion of the program is scheduled for Wednesday 11 May from 1:45-2:45 and 3:00 to 4:00 (a short break scheduled between sessions). Please let me know if you (or a designated alternate) would be available to provide an overview of the following systems:

Hal asked me to review the below thread and make a recommendation. After discussing with [   ] here's what we came up with...

First, based on my recollection, the Voicebox is a portable system, but not necessarily a laptop. Second, since this Voicebox is NOT an FBI system that is being connected to a FBI system, it deserves some scrutiny from security, which I am sure that you have already done. We are assuming that this scenario may repeat itself in the future. Therefore, we feel that it would be appropriate for there to be a written operating procedure (most likely a page or two at most) that describes the following: 1) the Voicebox while attached to DCS 3000 will be under FBI control, 2) that appropriate safeguards are in place (listing safeguards), and 3) describing the sanitization process for ensuring that FBI data/information is not falling into the wrong hands when the Voicebox is removed from DCS 3000.

Once this is written and you review to ensure that it is adequate, we would ask that you please provide a copy of the operating procedure to the Accreditation Unit, so we can place it in the DCS 3000 C&A file for future reference. It would be the basis for future and similar request to do the same.

We did something similar to this (somewhat different circumstances) about 18 months ago involving a HIDTA operation in Denver. We agree that there is nothing here (at least on the surface) that would require any accreditation impact. We would just like it documented in the C&A file.

Hope this meets with your approval.

If you have any questions or would like to discuss, please let [   ] or me know.

b6
b7C

Thanks!

[   ]

Several months ago, I spoke to you regarding our task force squad that purchased its own Voicebox digital collection system and needed the OK from Security Division to use it on FBI cases. This is still in the works on our end, but we have a similar situation regarding a **portable** system and require the input of Security Division before we move forward.

Quantico ERF has supplied our division with a portable Voicebox system, but it is currently in use in our Toledo RA. The case agent in our Youngstown RA would like to conduct an upcoming FBI T-III on a digital system (rather than cassette tapes), but we do not have another system available (niether does ERF). The local HIDTA has purchased a portable Voicebox system and has agreed to let the Youngstown RA use it for this T-III. The system will be operated in the RA space and would be connected to our DCS-3000 network to obtain telephone target data. According to ERF, there is an acceptable configuration which enables secure transfer of the data. The issue arises in regards to conducting an FBI case on a system that is **not owned** by the FBI. As far as the data and audio that will be stored on the system is concerned, if necessary, we could remove the hard drives from the system before it is returned to HIDTA (replacements would have to be supplied by the FBI and software reloaded by the manufacturer).

From the security standpoint, can we use this system to conduct this upcoming T-III? Are there any other issues that must be resolved?

If you have any questions, please feel free to call me.

Thanks,

Subject: DCS-3000 One-Way Push - Status Update (2/7/05)

SENSITIVE BUT UNCLASSIFIED
NON-RECORD

All,

The one-way push is currently being field tested at sites [redacted] and [redacted] There are field issues involving the performance between the one-way push and the RW. All parties involved are working to correct and improve the systems performance. In parallel [redacted] esting is soon to begin within the ERF facility. This is a complex and integral part of the overall solution. Upon completion, this functionality shall be field tested as stated above.

To date [redacted] ield offices have received the one-way push equipment for installation [redacted] sites have completed the install, but not yet activated for connectivity. Remaining sites can expect to receive equipment throughout the year and prepare for installation. Each site shall be informed in advance regarding installation and activation. ERF is committed to minimize both operational risk and system failures. There shall certainly be growing pains as we expand the amount of users incorporating CALEA into the FCI cases. There is a vast number of telco providers and switch vendors that make an exhaustive in-house test virtually impossible. So some point in time, additional sites will be connected in order to field test as needed. We appreciate your cooperation and patience regarding this development process.

Regards,

____ is our System Administrator, I am the ISSO and _____ is the ISSM for the _____ project.

Also, I need to know which network _____ resides on.

The _____ is a self contained Windows domain network which functions as a tool for telecommunication
interception used in Title III case work. The systems are developed and provided by a contracted vendor which specializes
in this type of investigative tool. Each field office has a version of this network in place (varying in size according to need).
Additionally a number of RAs have a system. The combination of these systems is reaching 100. The systems do have a
firewalled link to the DCS3000 project which allows the systems to recieve the Call Data Content record information from
wireless technology intercepted calls. The systems run at the sensitive but unclassified level.

SENSITIVE BUT UNCLASSIFIED

	(OTD) (FBI)

From: _____ (ITD) (FBI)
Sent: Tuesday, January 11, 2005 9:41 AM
To: _____ (ITD) (FBI); _____ (ITD) (FBI)
Subject: RE: IG Questions Part II: Deadline ASAP

<u>**UNCLASSIFIED**</u>
<u>**NON-RECORD**</u>

_____

I'm not sure we're the right group to answer question number 8 since we do not conduct Title IIIs or FISAs (we provide support for these operations upon requests from the field). Divisions 5 and 6 should have these numbers - CALEA was enacted in October 1994. _____ has a list of Title-IIIs for each fiscal year by field office. There is an annual unclassified disclosure of FISA applications published by the DOJ, but the actual number of FISA targets and intercepts is classified secret and is treated as "need-to-know only" information - and I don't know.

b2
b6
b7C
b7E

Information from the annual unclassified FISA report _____

Year	FISA Applications Submitted
1996	
1997	
1998	
1999	
2000	
2001	
2002	
2003	

ITD has provided the DCS-3000 CALEA pen-register and trap/trace data collection system to more than 50 federal, state, and local law enforcement agencies to assist with CALEA based intercepts. The following are examples of the agencies that ITD has assisted in this regard:

Local Law Enforcement	State Law Enforcement	Federal Law Enforcement

b2
b7E

I hope this helps,

TICTU Customer,

The TICTU has created a computer-based training course for TTAs and CMP technical staff. The course, entitled Switch-Based Intercepts using DCS 3000, provides background information on the technology used to conduct CALEA based intercepts as well as basic information on how to use the DCS 3000 suite of applications.

TICTU needs your help! TICTU needs to conduct a beta test and review before releasing the course to the entire CMP community. To this end, we ask you to help us evaluate the training. If you agree, we will mail you a CD with the training course and instructions. All we ask is you review the material and fill of the evaluation form. TICTU would like to release this training to the field as soon as possible. If you can, please submit your evaluation form by Friday, July 21, 2006.

If you are unavailable to review this course, please let us know. Questions concerning this course review can be directed t[   ]at (703)[   ]

Thank you for your help ensuring that we produce a quality training product.

Thanks,

SECRET//NOFORN
RECORD 315

Here are the CALEA numbers for 2006. There are multiple ways to present the information. The two I chose are: 1) new lines added in CY 2006, and 2) lines intercepted in CY 2006.

New Lines Added in CY 2006

Lines Intercepted in CY 2006

Note these numbers are for CALEA-enabled intercepts supported by the DCS-3000 system. The T-50 numbers will comletely overlap with the DCS-5000 numbers, and a portion of the criminal numbers will overlap with the DCS-6000 numbers.

I believe the intent is still to use the funding for the purpose originally requested; however, the situation has changed. GITMO still requires a system and has been going through the process to find internal DOD funding. We proposed a system configuration, which they accepted, but DOD internal funding is not yet forthcoming. They may be rethinking their needs but until they confirm that they have sufficient funding and can meet their requirement, we plan to use this funding for the system.

<u>UNCLASSIFIED</u>
<u>NON-RECORD</u>

This requests the assistance of the "To" addressees to meet a short-fused, very high-visibility DOJ tasking that the FBI received yesterday. The tasking relates to requirements by DOJ (passing down requirements by OMB) that agencies must on a quarterly basis certify 90% completion (for all FBI systems) of Privacy Impact Assessments (PIAs) required by Section 208 of the E-Government Act (E-Gov). To meet the two deadlines imposed by DOJ, we will need completed inputs by affected divisions by 6/9 and 6/21, as described below .

The FBI has been doing our own PIAs for years, and we have known about the changes looming under E-Gov for many months. We have, however, been long awaiting specific implementation guidance from DOJ, which has only just moved to resolution with the very recent arrival and identification/assumption of responsibilities of DOJ's new Chief Privacy and Civil Liberties Officer (Jane Horvath). This culminated in the 5/30/2006 DAG memo which we received yesterday (TRIM 06/DO/3020) directing the FBI to focus on the 28 FBI Law Enforcement systems on the FBI's 2006 FISMA inventory (see attached).

FISMA_LE_Spreads
heet (version ...

OGC remains responsible for coordinating the PIA process, and we are doubling the OGC personnel assigned to

P.P.S. I apologize for activating the read-receipt function for this e-mail, but I need to be able to send this to an alternate in case a primary recipient appears to be out of the office for an extended period.

[_____]
Below is my response to the restoration/enhancement of funding.

1) The TICTU requires $1.0 million for the DCS-Net redundnacy implementation.

[_____]

2) The TICTU requires $500k for the upgrade of DCS 3000 server machines. The DCS 3000 server machines are aging and require upgrade to
provide reliable data storage. These machines are installed in every FBI field office and require 24/7 operational readiness for support of both Title III
and Title 50 CALEA based Electronic Surveillance (ELSUR). The failure of these machines will result in the loss of collected data and intelligence.

Greetings,

_____ I left you a voice mail a few seconds ago. Below is a question from DI. Please answer and reply ASAP, as DI will be briefing their AD this afternoon. Thanks.

1) RE: The DCS-5000/DCS-6000 request - DTP requests 14 new positions. We are concerned that external oversight from DOJ and OMB is going to question so many new positions. Why are so many additional positions required especially given the fact that the program is seeing a diminishing trend in the number of systems deployed. We understand that those systems in the FY2001/2002 timeframe are near the end of their life cycle and will need to be replaced but oversight might say replacing a system should be no more difficult than installing one.

There has been a heavy reliance on contractor support since the initiation of this project. While the benefits of being able to hire specific, technical expertise as required has proved to be efficient, a hard lesson learned is that contracted support is only as good as the funding stream that supports it. Since FY2003, base funding for TICTU has decreased from $41.02M to $26.09M due to permanent rescissions, realignments, and reallocations. Concurrent with the decrease in funding was a significant increase in the number of systems requiring deployment, upgrade, and

maintenance - 126 Title 50, 97 Title III systems, and 56 DCS-3000s. Although the number of systems has decreased since the initial deployments, the desired government-provided workload required to support them has never been reached - hence the reliance on contractor support. The primary maintenance capability that provides on-site field support, provided by the Dedicated Contractor Support Program (DCSP), is scheduled to be downsized by 30+ personnel in FY 2007. TICTU must continue to supplement field assets with maintenance capabilites to sustain collection capabilities. This supplement is best provided by government personnel who are a more stable and cost-effective resource. TICTU requires the additional personnel to ensure that the effacacy (reliability, availability, and maintainablity) of digital collection capability is not diminished, as well as, ensuring that the FBI is on sure footing with the right skill sets to migrate to the next generation on digital collection systems, i.e., regionalization.

TICTU has been, and continues to be, asked to do more with less. The requested personnel is necessary to help offset the impact of funding decreases.

                                                                                                                              b7C

DCS6000
Equipment: 573000IC
D6101IC $79,000 (In the process of adding w/s's)

Services: 5525-6JM
D6202 $500,000 (set aside for [   ] does he want me to decrease the line by half and give it to someone who may need it?)

D6203 $33,171 (AQC - Front desk - MOD in process)

DCS5000
Equipment: 573000IC
D5101 $1,937,674 (This is for Raytheon equipment)

Software Maintenance: 5-2520IC
D5202 $304,747

X   (6)

[ ] tached is the revised version of the DCS-5000 submission. I will have the DCS-3000 submission sent to you as soon as it is completed.

The transfer is complete. You now have an additional $402,299 in your IC equipment line. This includes the TICTU training balance of $11,245 and the $391,054 of your remaining equipment maintenance funds (which is now 0.) Please, spend spend spend! Your balance is now $1,937,673.72 - not included are Raytheon ($1.??) and TCAU/SBIT Circuits ($8K).

In addition you have the $304,747 of SW maint., $123,218 of Prof Serv., as well as $88,961 of P&S.

Please forward to [REDACTED]
[REDACTED]

The cost of hardware, software, encryption equipment, maintenance and the development work for the interface to the trilogy network or other FBI IT infrastructure for the [REDACTED] System is unsure at this time. [REDACTED] system is currently configured as a stand alone collection system and does not interface with any outside network. Best approximation would be $1,000,000 per year.

Subject: FW: IT Information Request - Needed by Friday 3/24

SENSITIVE BUT UNCLASSIFIED
NON-RECORD

[REDACTED] TICTU is providing the following information regarding your IT Information Request. Included in the chart below is the DCS-5000 input. [REDACTED] input (SBIT) is also included below in **red**. *Please let us know if you need additional information.* Thank you.

(1) The table below provides the estimated project costs to interface the DCS-5000 to Trilogy.

DCS-5000 Project IT Costs

System components (WAN)	$ 388,000.00
Networking equipment	$3,337,000.00
Encryption equipment	$ 814,000.00
Network maintenance/control*	$ 250,000.00
Software development	$ 153,000.00
	$4,942,000.00

b2
b6
b7C
b7E

*Recurring cost

Amounts are based, in part, on numbers of networking equipment and costs provided by [REDACTED] for 82 systems in field offices and resident agencies.

(2) SBIT's Input from [REDACTED]
The cost of the hardware, software, and the development work for the interface to the Trilogy network or other FBI IT infrastructure for the DCS-3000 system is approximately $750,000 per year. The majority of this cost is for hardware (e.g. routers and other networking equipment). The DCSnet costs are approximately $500,000 per year if you include the IP service contract we have with [REDACTED] **can elaborate on this topic if needed.**

This is tied primarily to future requests for money, 300 exhibits and requisition in FY07 and forward. However, the cost of each system should be looked at so we can determine our investment and support needs that are truly IT. We would like to know the cost of the part of each system that is IT (that allows our collection systems to connect to trilogy, operate remotely over an IT system, prepares data to be sent over/to an IT system).

I know this is a little vague but we need an estimate with some basis behiond it.

Thanks,

Subject: IT Information Request - Needed by Friday 3/24

<u>SENSITIVE BUT UNCLASSIFIED</u>
<u>NON-RECORD</u>

Marcus Thomas has asked that we determine the cost of the IT portions of the OTD collection systems listed on the OCIO master list of systems, applications, databases, and networks. For the systems/projects listed below, please determine or estimate as best you can the cost of the hardware, software, and the development work for the interface to the Trilogy network or other FBI IT infrastructure. This will help us separate the funding of National Security Systems that are not truly IT from IT systems, databases, applications and networks. Please provide an estimate by Friday 3/24.

EDMS - IT Interface
DCS 6000 - IT Interface
DCS 3000 - IT Interface
DCSNet (CALEA transport)
CARTSAN - IT Interface
CART Family of Systems

Even with the extension of time to complete the training associated with being a privelaged user, we should probably identify which systems need to have the privelaged user Ruels of Behavior (ROB) created for. As I see it there are primarily three systems that are supported by the DCSP that each should have a ROB form. They are the [____] System (DCS5000) the Voice Box System (DCS6000) and the DCS3000. My understanding is that each of these will be accredited at an enterprise level such that the system in Albany and the system in Portland both fall under a single ROB. But the three separate type of system each require their own ROB. So each system administrator will fill out three ROBs.

The form on the Security page[_____]only has a generic Rules of Behavior form that requires system name entry. To avoid confusion, I would recommend that TICTU identify how they want the system names to appear on the ROB. I believe that since each system is acredited seperatly that a unified "ELSUR Systems" ROB would not be in order.

☐☐☐☐☐☐

    I am forwarding this message to ☐ and ☐ get some of the answers for you. ☐ s on Vacation till 2/20. The DCS-3000 is now in the Shield. It is probably about 150-200 feet between the DCS-3000 and RW1 and RW2. What we can do is run a longer CAT5 from the port and move the DCS-3000 closer to RW1 and RW2 so you can order two 50 ft cables. RW3 is in NJ. What we will probably need to do is get an additional DCS-3000 for our NJ site where RW3 is. We can create ☐☐☐☐☐☐ get the info out there. Also, it would make good sense to have a DCS-3000 out there for contingency purposes. You will need a 50 ft. cable for out there too.

    I will be ordering a static DSL line into the Shield in the next couple of days. I got authorization to put it under our covert Title III account.

Thanks for the help.

H ☐☐☐☐☐☐

In preparation for the One Way Push installation I'll need to know what length serial cables are needed.
Typically, we install the Lowside Server into the DCS-6000 rack and the HiSide Server into the RW rack. We then connect the two servers via serial cable. With that being said, how many One Way Push systems are required - RW#1, RW#2, RW#3, or all? How many DCS-6000 systems do you have - three like the RW and in the same locations? Do we have the rack space in the DCS-6000 for a 2U Server, or if we are required to put more than one in a rack? Do you have enough ☐ ports available on the ☐☐☐☐☐☐ switch for (3) servers? Do

(30)

you have one free port on each [REDACTED] switch? What length serial cable is required to go from the DCS-6000 rack to RW#1, RW#2, and RW#3? Do you have enough UPS ports and power to handle the additional equipment? Three servers use 750W and the other three servers use 150W. Please let me know so that I can get the cables made to size. Usually we use 20ft, 35ft, and 50ft denomonations. Please call if you have any questions.

Thnx,

[REDACTED]

I know you are avoiding me. The sooner the better. We will start with the DCS-3000 targets first. Once we get those working, we will start on some CALEA T-1s. I have the [REDACTED] making a list for me regarding how many targets come from each CO. We will start with the biggest Central Offices first and then go from their. Once I have some numbers I will let you know. [REDACTED] is the TTA in charge of the DCS-3000 here if you have any questions. Talk to you soon.

Cc: [redacted] (TD) (CON)
Subject: FW: DCS6000 Remote

[redacted]

    I am forwarding this e-mail to you in regards to the legal and accreditation issues mentioned below. Chicago desires to remote a T-III from headquarters city to their [redacted]

[redacted] the DEA has been "hub" collecting for years, so one would think the jurisdictional issue is not an impediment or has yet to be challenged in the courts. Do you foresee problems?

[redacted] as for Security, would accreditation be a problem if TICTU addresses this case from a proof of concept perspective? The VoiceBox (VB) collection system will be going through the C & A process again shortly. Also, this system is unclassified, and even though the interception would be traveling from Chicago t[redacted]rom/to FBI controlled space) via a T-1, the routers will have encryption. Is that enough to satisfy Security? Any additional forseen problems?

    I believe FBI criminal collection is moving in this direction anyway, so now may be the time for TICTU to do some R & D. Thanks.

Subject: DCS6000 Remote

RMS# 105654 - Previously submitted requesting DCS6000 remote capability (Assigned to [redacted] - Status is Working

[redacted]

Per our discussion, here are some items of interest/or concern with regards to DCS6000 remote workstations. Also, I have talked with [redacted] and his is in agreement that Chicago would like to be a test site once this capability exists. We would be interested in an estimated time frame that this could happen and if there is anything that could be done to speed up the release of this technology.

Concerns/or Issues that may need to be addressed:

Legal - Monitoring/collecting in different jurisdictions
Network - Minimum bandwidth, encryption
Security - Encryption, Accreditation

Possible requirements at a remote site:

Computer(s) (DCS6000/3000)
Router + (T1's (Network connection/data) and/or ISDN's)
Remote Server
