

Simi Valley-

EMERGENCY PROCEDURES. Preventing a mishap or SUAS loss or damage depends on early recognition of dangerous flight conditions or malfunctions followed by appropriate corrective action. Both the VO and MO will memorize the immediate action items of each emergency procedure outlined in the Operator's Manual. Mission planning must include alternative courses of action available for each phase of the proposed flight. To the extent possible, planned courses of actions for emergencies should be made before the flight begins to include ensuring the Rally waypoint (in the event of loss-of-link) and waypoint "E" (for routine landings) are within the designated COA airspace. During flight, both operators must maintain situational awareness and VO should always know which direction to fly to escape hazard. MO: Should always know UA position relative to hazards and be ready to give VO headings and altitudes to fly to safety. Those steps that must be performed immediately in an emergency are underlined and in bold print in the Operator's Manual. The operators must be able to perform these steps without referencing the checklist or manual. Non-underlined steps can be accomplished with use of the checklist. During an emergency, the PIC will complete, at a minimum, the following:

Brennan Field/ Upper Waste Management/ Lower Waste Management

- A. Follow procedures outlined in Operator's Manual.
- B. Immediately notify SOCAL TRACON on 120.4 and advise them of the nature of the emergency situation and/or any other pertinent information.
- C. If there is a fly-away emergency, contact SOCAL TRACON and advise last know position, direction of flight, battery time remaining and last known altitude. Assist SOCAL TRACON as much as possible.

Fillmore

- A. Follow procedures outlined in Operator's Manual.
- B. Immediately notify Hawthorne AFSS 866/879-8252 and advise them of the nature of the emergency situation and/or any other pertinent information.
- C. If there is a fly-away emergency, contact Hawthorne AFSS and advise last know position, direction of flight, battery time remaining and last known altitude. Assist Hawthorne AFSS as much as possible.

Taft

- A. Follow procedures outlined in Operator's Manual.
- B. Immediately notify Rancho Murieta FSS 916/354-1561; AFSS 866/272-7525 and advise them of the nature of the emergency situation and/or any other pertinent information.
- C. If there is a fly-away emergency, contact Rancho Murieta FSS and advise last know position, direction of flight, battery time remaining and last known altitude. Assist Rancho Murieta FSS as much as possible
