

## **NAS Operational Capability**

Cannon AFB is a DOD controlled non-joint use airfield. USAF air traffic controllers provide ATC tower and radar approach control service within the surrounding Class E airspace. To aid in separation and sequencing, tower controllers have Digital Bright Radar Indicator Tower Equipment "D-BRITE" capability. Cannon Air Force Base Radar Approach Control will provide radar separation at all times while the MQ-9 is transient between Cannon's Class D airspace and R-5104A.
