## UNITED STATES DISTRICT COURT DISTRICT OF MASSACHUSETTS

MASSACHUSETTS BAY
TRANSPORTATION AUTHORITY

Plaintiff

v.

Civil Action No. 08-11364-GAO

ZACK ANDERSON, RJ RYAN, ALESSANDRO CHIESA, and the MASSACHUSETTS INSTITUTE OF TECHNOLOGY

**Defendants** 

## SECOND SUPPLEMENTAL DECLARATION OF IEUAN G. MAHONY

- 1. I am a partner at Holland & Knight, LLP, representing the Massachusetts Bay
  Transportation Authority ("MBTA") in this matter. The following further supplements my
  earlier Declaration in this matter, and is submitted in opposition to the Individual Defendants'
  Cross Motion for Reconsideration.
- 2. Attached as Exhibit 1 is a true and accurate copy of an article published in MIT's The Tech: Online Edition entitled "Students' Subway Security Talk Canceled by Court Order," by Michael McGraw-Herdeg and Marissa Vogt dated, before updating, August 8, 2008. See <a href="http://www-tech.mit.edu/V128/N30/subway.html">http://www-tech.mit.edu/V128/N30/subway.html</a>.
  - 3. The Article reads in relevant part:

Though the presentation itself has been canceled, the presentation slides and confidential vulnerability report the students wrote for the MBTA are now widely available online. Still unavailable is some key information that would complete the attack and let people copy transit cards or add money to their CharlieTickets. It is unclear whether the students had managed to copy or edit the content of the CharlieCard, but their presentation included a detailed discussion of weaknesses in the card's encryption. *Id.* at 2 (emphasis added).

## 4. The Article further reads in relevant part:

Phil Zimmerman, the individual who provided the MIT Undergrads with a Declaration immediately prior to the Security expert Phil Zimmerman said that traditionally researchers give at least a month after notification before they disclose a vulnerability in a software system. In hardware systems such as the MBTA's magnetic-stripe and RFID card system, where fixing the vulnerability could possibly take more time, researchers usually offer more time, he said. "If it was me, I would've tried to give them more time to fix it," Zimmerman said. But, he said, "public disclosure is a good thing," because intense public scrutiny can help force people to fix systems. *Id.* at 4 (emphasis added).

## 5. The Article further reads in relevant part:

Dan Kaminsky, a security researcher who recently discovered a serious vulnerability in the domain name system underlying the Internet, said that the students' disclosure could have been handled more gracefully. But the MBTA also responded inappropriately, he said, by suing the students instead of just asking for time. *Id.* at 5 (emphasis added).

Signed under the penalties of perjury this 14th day of August, 2008.
